WORLD TRADE STATISTICAL REVIEW

2017

About the WTO

The World Trade Organization deals with the global rules of trade between nations. Its main function is to ensure that trade flows as smoothly, predictably and freely as possible.

About this publication

World Trade Statistical Review provides a detailed analysis of the latest developments in world trade. It is the WTO's flagship statistical publication and is produced on an annual basis.

For more information

All data used in this report, as well as additional charts and tables not included, can be downloaded from the WTO web site at www.wto.org/statistics

This publication has been prepared under the direction of Robert Koopman, Director, Economic Research and Statistics Division and Andreas Maurer, Chief, International Trade Statistics Section. The coordination and supervision of the preparation of tables and charts and the production of the report was undertaken by Ninez Piezas-Jerbi, with the assistance of Sebastian Wardyn. Statistical research, data compilation, the preparation of estimates and trade analysis were conducted by Barbara d'Andrea-Adrian, Alejandra Barajas Barbosa, Lori Chang, Christophe Degain, Florian Eberth, Antonella Liberatore, Coleman Nee, Ninez Piezas-Jerbi, Ying Yan and Maria Mercedes Ycaza Nowak. Special contributions to this publication were made by the WTO's Market Access Division, Market Access Intelligence Section, the Aid for Trade Unit and the Trade Monitoring Section of the Trade Policies Review Division.

Acknowledgements are owed to the multilateral, national and private institutions for providing their statistics. The detailed statistical sources used in this report are presented in Chapter VIII.

The International Trade Statistics Section also wishes to thank colleagues from the Information and External Relations Division (IERD) and the Languages Documentation and Information Management Division (LDIMD) whose collaboration is vital in the production of this report. In particular, recognition is owed to Anthony Martin and Serge Marin-Pache for the editing and production of the publication and to Steve Cooper and Joao Dos Santos De Almeida for preparing the publication for the website. Recognition is also owed to the French and Spanish translators for rendering the report in the WTO's other official languages.

Finally, we wish to thank the community of "WTO Statistics" users for their loyalty and their suggestions and comments for improvements to WTO statistics. Their regular feedback allows us to better provide relevant statistical data.

This publication is also available online at www.wto.org/statistics

For more information on the contents of this report, comments or suggestions for improvement may be sent by email to the International Trade Statistics Section (statistics@wto.org).

A message from Director-General Roberto Azevêdo

In this second edition of “World Trade Statistical Review”, we look back over the past ten years to examine the latest trends in trade and to analyse how and why global trade is changing.

Our statistical data confirm that trade has continued to support economic growth and development, helping to reduce poverty around the world. World merchandise exports have increased in value by about 32 per cent since 2006, reaching USD 16 trillion in 2016. At the same time, world exports of commercial services have accelerated by about 64 per cent, reaching a total of USD 4.77 trillion.

The highest growth in merchandise trade has been achieved by manufactured goods and agricultural products, which have increased by 37 per cent and 67 per cent in value respectively. In fact, the only significant exception has been in exports of fuels and mining products, which are 10 per cent lower than the level achieved in 2006, mostly due to a fall in crude oil prices.

These statistics are good news for the global economy overall. However, they hide the more recent trend. In 2016, world merchandise trade recorded its lowest growth in volume terms since the financial crisis of 2008, increasing by just 1.3 per cent. This is half the level achieved in 2015 and well below the 4.7 per cent average annual growth rate since 1980.

The low level of trade growth in 2016 is driven in part by weak GDP growth of just 2.3 per cent, down from 2.7 per cent in 2015 and also below the 2.8 per cent average annual rate since 1980.

There has also been a decline in recent years in the ratio of trade growth to GDP growth, which has fallen to around 1:1 in the wake of the financial crisis. This contrasts with trade growing 1.5 times faster than world GDP on average since the end of the Second World War. And last year marked the first time since 2001 that the ratio has dropped below 1, to 0.6.

However, the leading indicators of trade in the first few months of 2017 are generally more positive, with trade growth of 2.4 per cent estimated for this year. Trade is also expected to be given a boost by the implementation of the WTO’s Trade Facilitation Agreement (TFA), which entered into force earlier this year. The aim of the TFA is to streamline customs procedures and to speed up the flow of goods across borders. It has been estimated that full implementation of the TFA could lead to an increase of as much as 2.7 percentage points per year to world trade growth by 2030.

Looking back over the past year, it is evident that trade remains highly concentrated. For both merchandise and commercial services, the top ten traders represent more than half of world trade.

Nevertheless, developing economies are increasing their participation. Their share of world merchandise trade has increased to 41 per cent while for commercial services it has risen to 36 per cent. However the share of least-developed countries (LDCs) in world merchandise and commercial services exports remains far too low, below 1 per cent.

“Robust data and statistics provide an essential basis for all of our work at the WTO, helping us to pursue our mission of making the opportunities that trade offers available to all.”

Trade between developing economies has continued to rise. In 2015, it represented more than half of their total exports, with manufactured goods reaching as high as 67 per cent.

In the services sector, travel and other commercial services (a category that includes financial and business services) grew the fastest. Travel was driven in particular by strong intra-regional tourism. World exports of travel, which includes travellers' spending on goods and services during their visits abroad, rose by 2 per cent in 2016. This reflects an increase in tourist numbers worldwide and expanded tourism within Asia, with China becoming an increasingly important source of expenditure on overseas travel. Among other commercial services, information and communication technology (ICT) was the fastest-growing category. Computer services represented over 72 per cent of ICT exports, or US\$ 353 billion, partly boosted by the recent expansion of the WTO's Information Technology Agreement.

The rise of new technologies is likely to have a positive impact on digital trade in years to come, offering many new opportunities to entrepreneurs and small businesses around the world. Good policymaking in this area requires an improvement in statistics on digital trade. To tackle this challenge, an inter-agency task force convened by WTO and OECD is advancing the issue.

Indeed, robust data and statistics provide an essential basis for all of our work at the WTO, helping us to pursue our mission of making the opportunities that trade offers available to all, with all sections of society able to participate and benefit. Therefore I would like to thank everyone that has worked on this report. I am sure that it will prove a valuable resource in pursuing this mission.

Data for the latest year are provisional.

The statistical data in this publication are supplied by and under the responsibility of the relevant statistical authorities. In line with the practice of the WTO Secretariat, this publication uses the names of WTO members as listed in the latest revision to document WT/INF/43. References to other geographical territories and groupings are based solely on terms provided to the WTO Secretariat by WTO members and observers or terms used by relevant international organizations.

The use of such data and terms does not constitute or imply an expression of opinion by the WTO Secretariat concerning the status of any country or territory, or the delimitation of its frontiers, or sovereignty. The colours, boundaries and names shown and the designations used on maps in this publication do not imply any judgment, official endorsement or acceptance by the WTO Secretariat as to the legal status or frontier of any territory, or the rights and obligations of any WTO member in respect of WTO agreements. References and data relating to territories that are not WTO members or observers in their own right do not amount to an endorsement as to the WTO status, if any, of such territories.

Closing date for provision of data: 15 May 2017.

**Trends in
world trade:
Looking back
over the past
ten years**

Merchandise trade	10
Trade in commercial services	11
Regional trade agreements	12
WTO membership	13
Economies by size of merchandise trade, 2016	14
Economies by size of trade in commercial services, 2016	15

Merchandise trade

World exports of manufactured goods increased from US\$ 8 trillion in 2006 to US\$ 11 trillion in 2016.

World exports of agricultural products increased by an average of **5%** per year.

World merchandise trade by major product grouping, 2006-2016 (US\$ billion)

World exports of fuels and mining products have declined by 10% since 2006.

World merchandise trade by major product grouping, 2006-2016 (Index 2006 = 100)

World exports of agricultural products have increased by **70%** since 2006.

Note: World trade is calculated as an average of exports and imports of merchandise trade.

Trade in commercial services

World exports of commercial services totalled US\$ 4.8 trillion in 2016, up from US\$ 2.9 trillion in 2006.

World trade in commercial services by category, 2006-2016 (US\$ billion)

Travel and other commercial services have increased the most, with both being 1.7 times higher than in 2006.

World trade in commercial services by category, 2006-2016 (Index, 2006 = 100)

Note: World trade is calculated as an average of exports and imports of commercial services.

Regional trade agreements

The European Union and the North American Free Trade Agreement continue to dominate trade among regional trade agreements.

Merchandise exports of regional trade agreements, 2006-2016 (US\$ billion)

Trade within the EU represented 63% of all EU total exports in 2015. In NAFTA, ASEAN, SADC and MERCOSUR, intra-trade totalled 50%, 24%, 18% and 14% respectively.

Exports within regional trade agreements, 2006-2015^a (Share, %)

^a Latest period for which intra-trade data is available.

WTO membership

WTO members account for 98.2% of world merchandise trade. Asia, Europe and North America account for 88% of this total.

Share in world merchandise trade of WTO members, 2006-2016 (Percentage, %)

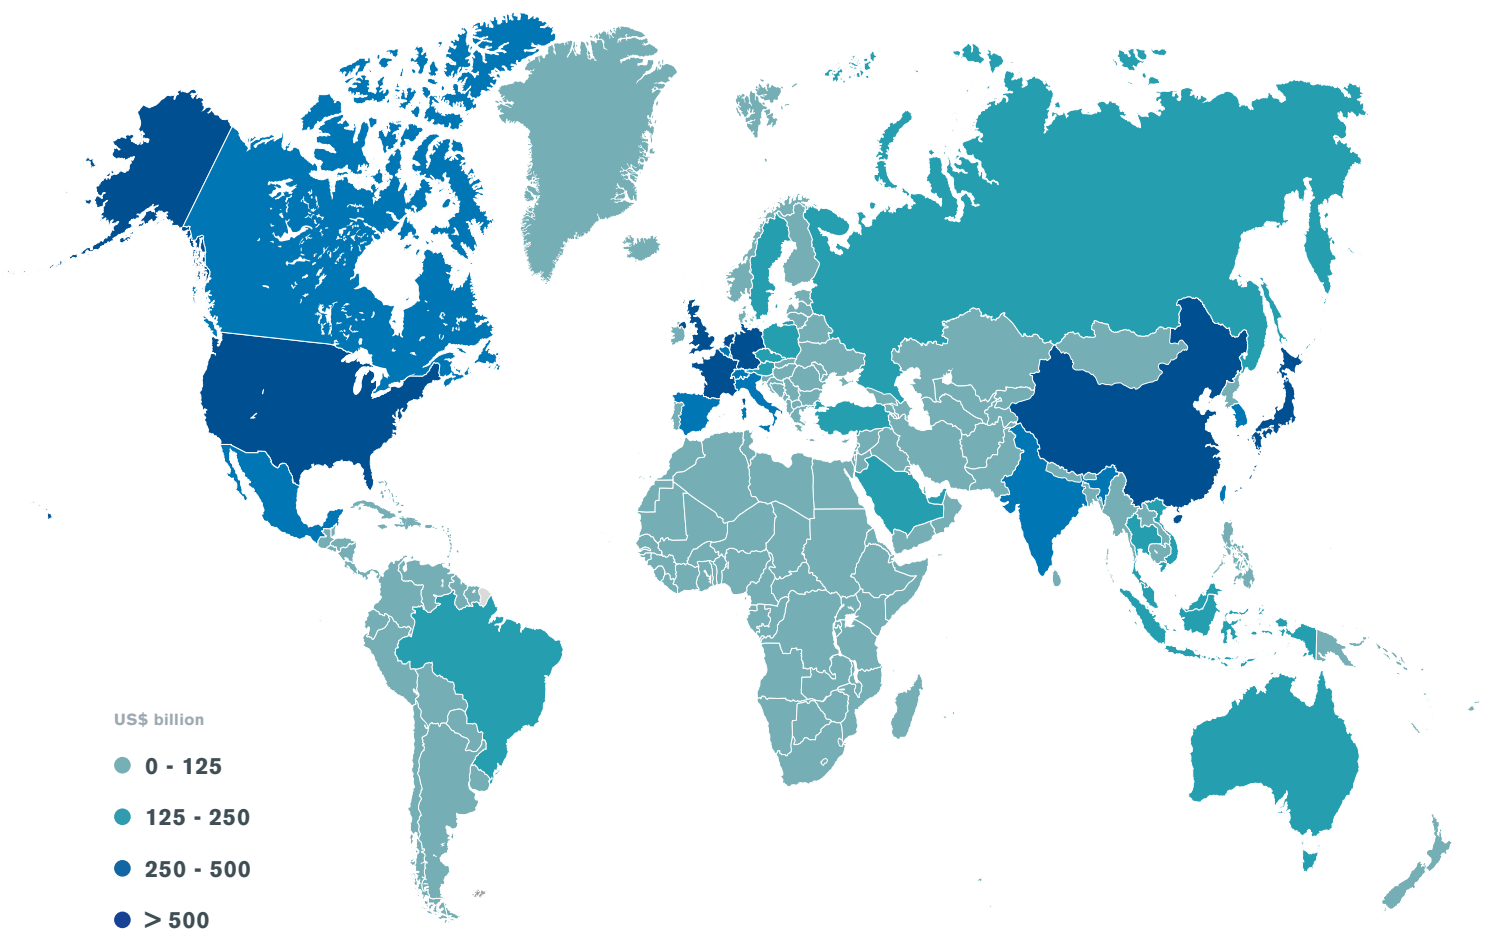

Merchandise trade of WTO members has increased to US\$ 15.4 trillion, up from US\$ 11.7 trillion in 2006.

World merchandise trade of WTO members, 2006-2016 (US\$ billion)

Note: World trade is calculated as an average of exports and imports of merchandise trade.

Economies by size of merchandise trade, 2016

53%

The top 10 traders in merchandise trade account for a little over half of the world's total trade in 2016.

41%

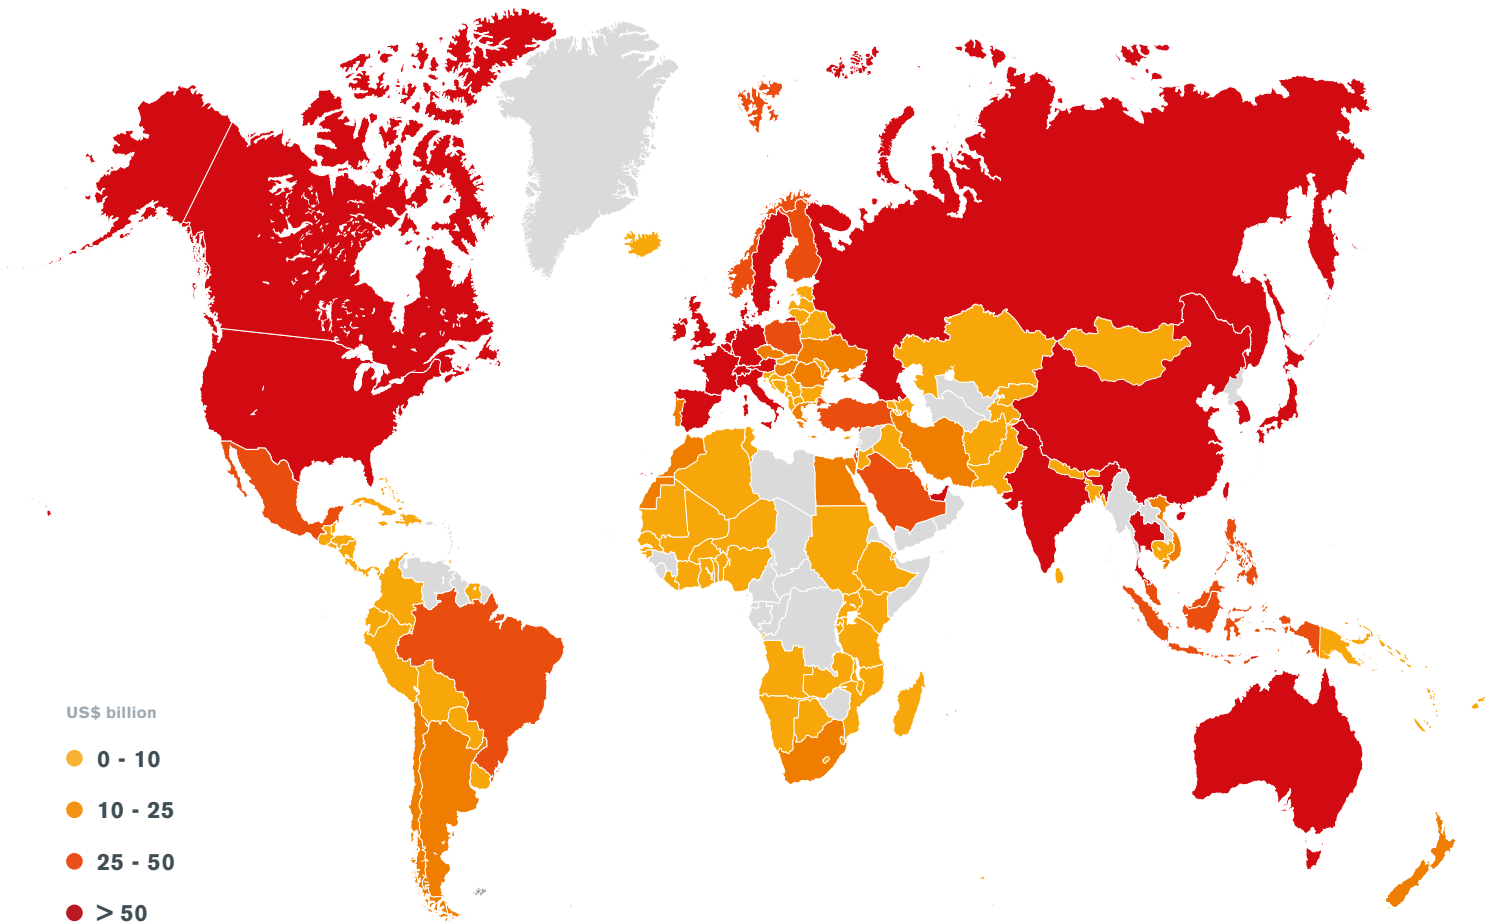

Developing economies had a 41% share in world merchandise trade in 2016.

US\$ 15.71 tn

Merchandise exports of WTO members totalled US\$ 15.71 trillion in 2016.

Note: Includes significant re-exports or imports for re-export.

Economies by size of trade in commercial services, 2016

53%

The top 10 traders in world commercial services represent more than half of the world's total trade in commercial services in 2016.

34%

Developing economies accounted for 34% of total trade in commercial services in 2016.

US\$ 4.73 tn

Exports of commercial services by WTO members totalled US\$ 4.73 trillion in 2016.

World trade and GDP growth in 2016 and early 2017

- Growth in the volume of world merchandise trade slowed to 1.3 per cent in 2016, down from 2.6 per cent in 2015, as continuing weakness in the global economy and low commodity prices had a negative impact on global import demand.
 - World growth in GDP dropped to 2.3 per cent in 2016, down from 2.7 per cent in 2015, well below the average of 2.8 per cent since 1980.
 - The slowdown in world trade partly reflected the further weakening of investment spending, which is the most trade-intensive component of import demand.
 - Although merchandise trade increased slightly in volume terms in 2016, it declined in value terms due to a fall in export and import prices. Merchandise exports fell by 3.3 per cent, to US\$ 15.46 trillion, in 2016.
 - Commercial services trade on a quarterly basis recorded growth of just 0.1 per cent in value terms in 2016, totalling US\$ 4.77 trillion. The weakest services component was transport, which tends to reflect fluctuations in goods trade.
 - Developing economies' imports dropped 3 per cent in the first quarter of 2016 before rebounding in the second quarter and recovering to their previous level by the end of the year. However, developed economies' imports remained weak throughout the year.
 - Trade indicators such as export orders and container throughput in major ports were up in the first quarter of 2017, suggesting stronger trade growth for the year, but the presence of significant risk factors also point to the possibility of less positive outcomes.

World trade in 2016: Latest trends and driving forces

Overview

In 2016, world merchandise trade recorded its lowest growth rate in volume terms since the financial crisis of 2008, with an increase of just 1.3 per cent, as measured by the average of exports and imports. This low level of expansion was half as strong as the 2.6 per cent increase recorded in 2015 and well below the 4.7 per cent average annual rate since 1980.

The weakness of trade growth last year was partly due to continuing weakness in the global economy, with economic activity slowing in both developed and developing economies.

But it also reflected deeper structural changes in the relationship between trade and economic growth. The most trade-intensive components of global demand were particularly weak in 2016 as investment spending slumped in the United States and as China continued to rebalance its economy away from investment and towards consumption, dampening global import demand.

Lacklustre world trade growth in 2016 was accompanied by weak real GDP growth of 2.3 per cent at market exchange rates. This was down from 2.7 per cent in the previous year and also below the 2.8 per cent average annual rate since 1980. Generally, trade growth

is much more volatile than GDP growth at the global level although both tend to rise and fall together.

Since the Second World War, the volume of world merchandise trade has tended to grow about 1.5 times faster than world GDP, although in the 1990s it grew more than twice as fast. However, in the aftermath of the global financial crisis the ratio of trade growth to GDP growth has fallen to around 1:1. Last year marked the first time since 2001 that this ratio dropped below 1 to 0.6 (see Chart 3.1). It is expected to recover partly in 2017 but the further slowing of trade relative to GDP remains a cause for concern.

Chart 3.1:
Ratio of world merchandise trade volume growth to world real GDP growth, 1981-2016
(Annual percentage change and ratio)

Source: WTO Secretariat for trade; consensus estimates for GDP based on reported data from a variety of sources including the International Monetary Fund, the Organisation for Economic Cooperation and Development and the United Nations.

Although world merchandise trade increased slightly in volume terms in 2016, it declined in value terms due to falling export and import prices. World merchandise exports were valued at US\$ 15.46 trillion in 2016, down 3.3 per cent from the previous year. The pace of contraction was slower than in 2015, when export values fell 13.5 per cent due to strong appreciation of the US dollar and a plunge in oil prices. All regions recorded declines in merchandise exports in 2016, with the smallest decline registered by Europe (-0.3 per cent) and the largest by the Commonwealth of Independent States (-16.2 per cent). On the import side, Europe saw a small increase (0.2 per cent) while all other regions recorded declines.

The value of world exports of commercial services grew by just 0.1

per cent in 2016, totalling US\$ 4.77 trillion. All regions recorded similar levels of growth, with the strongest performance seen in Asia (0.9 per cent). On the import side, Asia outpaced other regions by a wider margin (with growth of 2.6 per cent).

As in 2015, the discrepancy between trade growth in terms of volume and value in 2016 largely reflects declines in commodity prices as well as appreciation of the US dollar. However, these price changes were not as significant in 2016 as they were in 2015 (see Chart 3.2 and Chart 3.3).

Fuels saw the biggest decline in prices of any category of primary commodities in 2016, falling 16.5 per cent year-on-year. Smaller declines were recorded for agricultural raw materials (-5.7 per cent) and metals

(-5.4 per cent). In contrast, food prices increased slightly (1.3 per cent). Commodity prices overall fell by around 10 per cent in 2016. This is considerably less than the 35 per cent plunge recorded in 2015 but still significant, particularly for resource-producing countries whose export revenues have continued to fall, albeit at a slower pace.

The weakness of fuel prices was partly explained by the resilience of crude oil production in the United States, including from non-traditional sources such as shale. According to the US Energy Information Administration, oil output declined in the first half of 2016 but rose in the second half, limiting the year-on-year decline in output to 5.5 per cent. However, production for the year was still 77 per cent higher than the level recorded in 2008.

Chart 3.2:

Prices of primary commodities, January 2014 - February 2017
(Indices of US\$ values, January 2014 = 100)

Source: International Monetary Fund.

Chart 3.3:

Exchange rates of selected economies, January 2014 - February 2017
(Indices of nominal effective exchange rates, January 2014 = 100)

Source: Bank for International Settlements.

Appreciation of the US dollar also contributed to lower dollar prices for commodities since it allowed the same quantity of goods to be purchased with fewer units of currency. In 2016, the dollar appreciated 4.4 per cent on average against the currencies of US trading partners (i.e. in “nominal effective” terms) after having risen nearly 13 per cent in 2015.

Other major currency developments in 2016 included a 4.6 per cent average depreciation of China's yuan against the currencies of its trading partners and a 10 per cent decline in the average value of the UK pound. The yuan had risen 9.5 per cent in 2015 so the devaluation in 2016 could be seen as a correction. Meanwhile, the nominal effective

exchange rate of the euro remained stable in 2016, with a modest rise of 1.9 per cent.

Merchandise trade

The unusually low growth rate of 1.3 per cent in the volume of world merchandise trade in 2016 was the result of several factors that had an impact on imports of both developed and developing economies, although the latter were more strongly affected (see Chart 3.5).

Developing economies suffered a sharp 3 per cent decline in imports in the first quarter of 2016, equivalent to an annual drop of 11.6 per cent, but growth resumed in the second quarter and by the end of the year imports had returned to their previous

level. Meanwhile, imports of developed economies continued to grow but at a reduced pace.

The overall weakness of imports was due on the export side to slow growth of shipments from both developed and developing economies. For 2016, imports of developed economies grew 2.0 per cent while those of developing economies stagnated at 0.2 per cent. Exports recorded modest growth of 1.4 per cent in developed economies and 1.3 per cent in developing economies.

Worldwide, regions were affected to varying degrees by the slump in trade in 2016 (see Chart 3.6). The first quarter was characterized by financial turbulence that affected China and its regional trading partners as fears of an economic slump and currency

Import adjusted demand and the role of investment

A WTO working paper by Auboin and Borino examines the reduced sensitivity of trade to GDP, explaining the post financial crisis trade slowdown in terms of the expenditure components of demand (consumption, government spending, investment and exports). The paper develops an import intensity-adjusted measure of demand (IAD) that takes into account the import content of spending, with investment being the most trade intensive in most countries and government expenditure being the least. This measurement explains as much as 80 per cent of the trade slowdown since 2012-15 and could help to improve the accuracy of trade forecasts in the future. The level and import intensity of investment can change

over time, with implications for world trade (see Chart 3.4 and Chart 3.13). For example, the import content of Chinese investment spending fell from around 30 per cent in 2004 to 18 per cent in 2014 as China sourced more intermediate goods domestically. Meanwhile, the imported content of German investment rose from 24 per cent to 38 per cent between 1995 and 2014. These changes could possibly alter the geographic distribution of trade, with stronger trade in Europe and weaker trade in Asia. Low oil prices would also be expected to reduce investment in the energy sector. This probably contributed to the weakness of imports in oil producing and exporting countries in 2016.

Chart 3.4:
Import content of investment of selected economies, 1995-2014
(Share, %)

Source: World Input Output Database (WIOD) 2016 and WTO Secretariat calculations.

depreciation increased. Asian imports dropped in the first quarter but the slump was short-lived and Asia ultimately recorded growth of 2.0 per cent for the year.

Declines in imports of South America and other regions (comprising Africa, the Middle East and the Commonwealth of Independent States, including associate and former member States) were steeper and more persistent

than elsewhere, driven mostly by low commodity prices. Much of South America's decline was due to the situation in Brazil, which remained mired in a severe recession. Meanwhile, Europe's exports and imports grew faster than North America's, which have been mostly flat since the start of 2015.

Despite recording increases in its merchandise exports and imports in 2016, North America was responsible

for much of the weakening of trade growth last year (see Chart 3.7). The region only contributed 0.1 percentage points to world import growth of 1.2 per cent in 2016. This is much less than in 2015, when North American imports added 1.2 percentage points to world import growth of 2.9 per cent, or 42 per cent of the total increase.

Asia and Europe were the only regions that made significant positive

contributions to global import demand in 2016, Europe contributing 1.6 percentage points (39 per cent of the total increase) and Asia adding 1.9 percentage points (49 per cent of the total).

Low oil prices and declining rates of investment, particularly in the energy sector, are two of the reasons for North America's lacklustre trade performance in 2016. Investment made hardly any contribution to GDP growth in the United States in 2016 (see Chart 3.13).

Investment is the most import intensive component of GDP and has been particularly weak in developed economies since the financial crisis, with sharp contractions in Europe in 2012 and 2013 during the sovereign debt crisis. The contribution of investment

to China's economic growth has also declined, albeit more gradually. Investment accounted for more than half of China's GDP growth in 2012-13, but by 2016 this had fallen to 39 per cent.

Commodity prices and exchange rates played a large part in determining regional contributions to world trade growth in 2016. Plunging prices for oil and metals since the middle of 2014 have deprived resource-exporting regions of revenue needed to purchase imports, thereby reducing the volume of their imports. Prices have stabilized and staged a partial recovery since the start of 2016, but a return to price levels of a few years ago is unlikely as long as oil inventories remain high in major economies. Falling commodity prices tend to help net importers and harm net exporters, so their impact at

the global level evens out in principle. In practice, however, the price slide since 2014 appears to have had a large negative impact on resource-producing countries without a corresponding boost to resource-importing countries.

Chart 3.8 illustrates that fuels and mining products exerted a strong negative influence on trade growth in value terms for the first three quarters of 2016 but this contribution turned positive in the fourth quarter as commodity prices recovered. This bodes well for trade growth in 2017.

Trade in commercial services

As noted previously, world commercial services trade recorded growth of just 0.1 per cent in 2016. This followed a much sharper decline of 5.5 per cent in

2015, which was strongly influenced by the appreciation of the US dollar. Chart 3.9 shows percentage changes in the dollar value of exports of commercial services since 2013, broken down by the main categories of services trade. Exports of transport services, which are closely linked to goods trade, fell 4.7 per cent in 2016 following a fall of 9.5 per cent in 2015. Other types of services exports saw modest gains last year, including other commercial services (0.9 per cent), a category that includes financial services.

Quarterly data provides additional perspectives on changes in commercial services trade over the course of 2016. Chart 3.10 shows that year-on-year growth in world exports of commercial services strengthened in the first three quarters of 2016 before weakening in the fourth quarter. The weakness in this final period is mostly due to weaker

Chart 3.8:

services trade in Europe, since exports and imports of North America and Asia remained quite strong in the final quarter.

World trade and economic growth in early 2017

Leading indicators of trade were generally positive in the early months of 2017. This suggests a strengthening of trade at the start of this year. For example, container throughput of major ports has recovered from its slump of 2015-16 to reach a record high level in February, with year-on-year growth of 5.2 per cent in the first two months of 2017 (see Chart 3.11). New export orders also climbed to their highest level in several years in February, pointing to faster trade growth in the near future

(see Chart 3.12). Balanced against these positive indications are a number of clear and significant risks. Unexpected inflation could force central banks to tighten monetary policy more quickly than they would like, undercutting economic growth and trade in the short-run. Changes in fiscal policy could also have unintended international consequences that could reduce global economic activity and trade. Other factors, such as the uncertainty provoked by the United Kingdom's withdrawal from the European Union, could potentially have an effect.

Finally, the possibility of a rise in the application of restrictive trade policies could affect demand and investment flows, and cut economic growth over the medium to long term. In light of these considerations, the likelihood of downside risks

Chart 3.13:
Contributions to GDP growth of selected economies, 2005-16
 (Annual percentage change and percentage points)

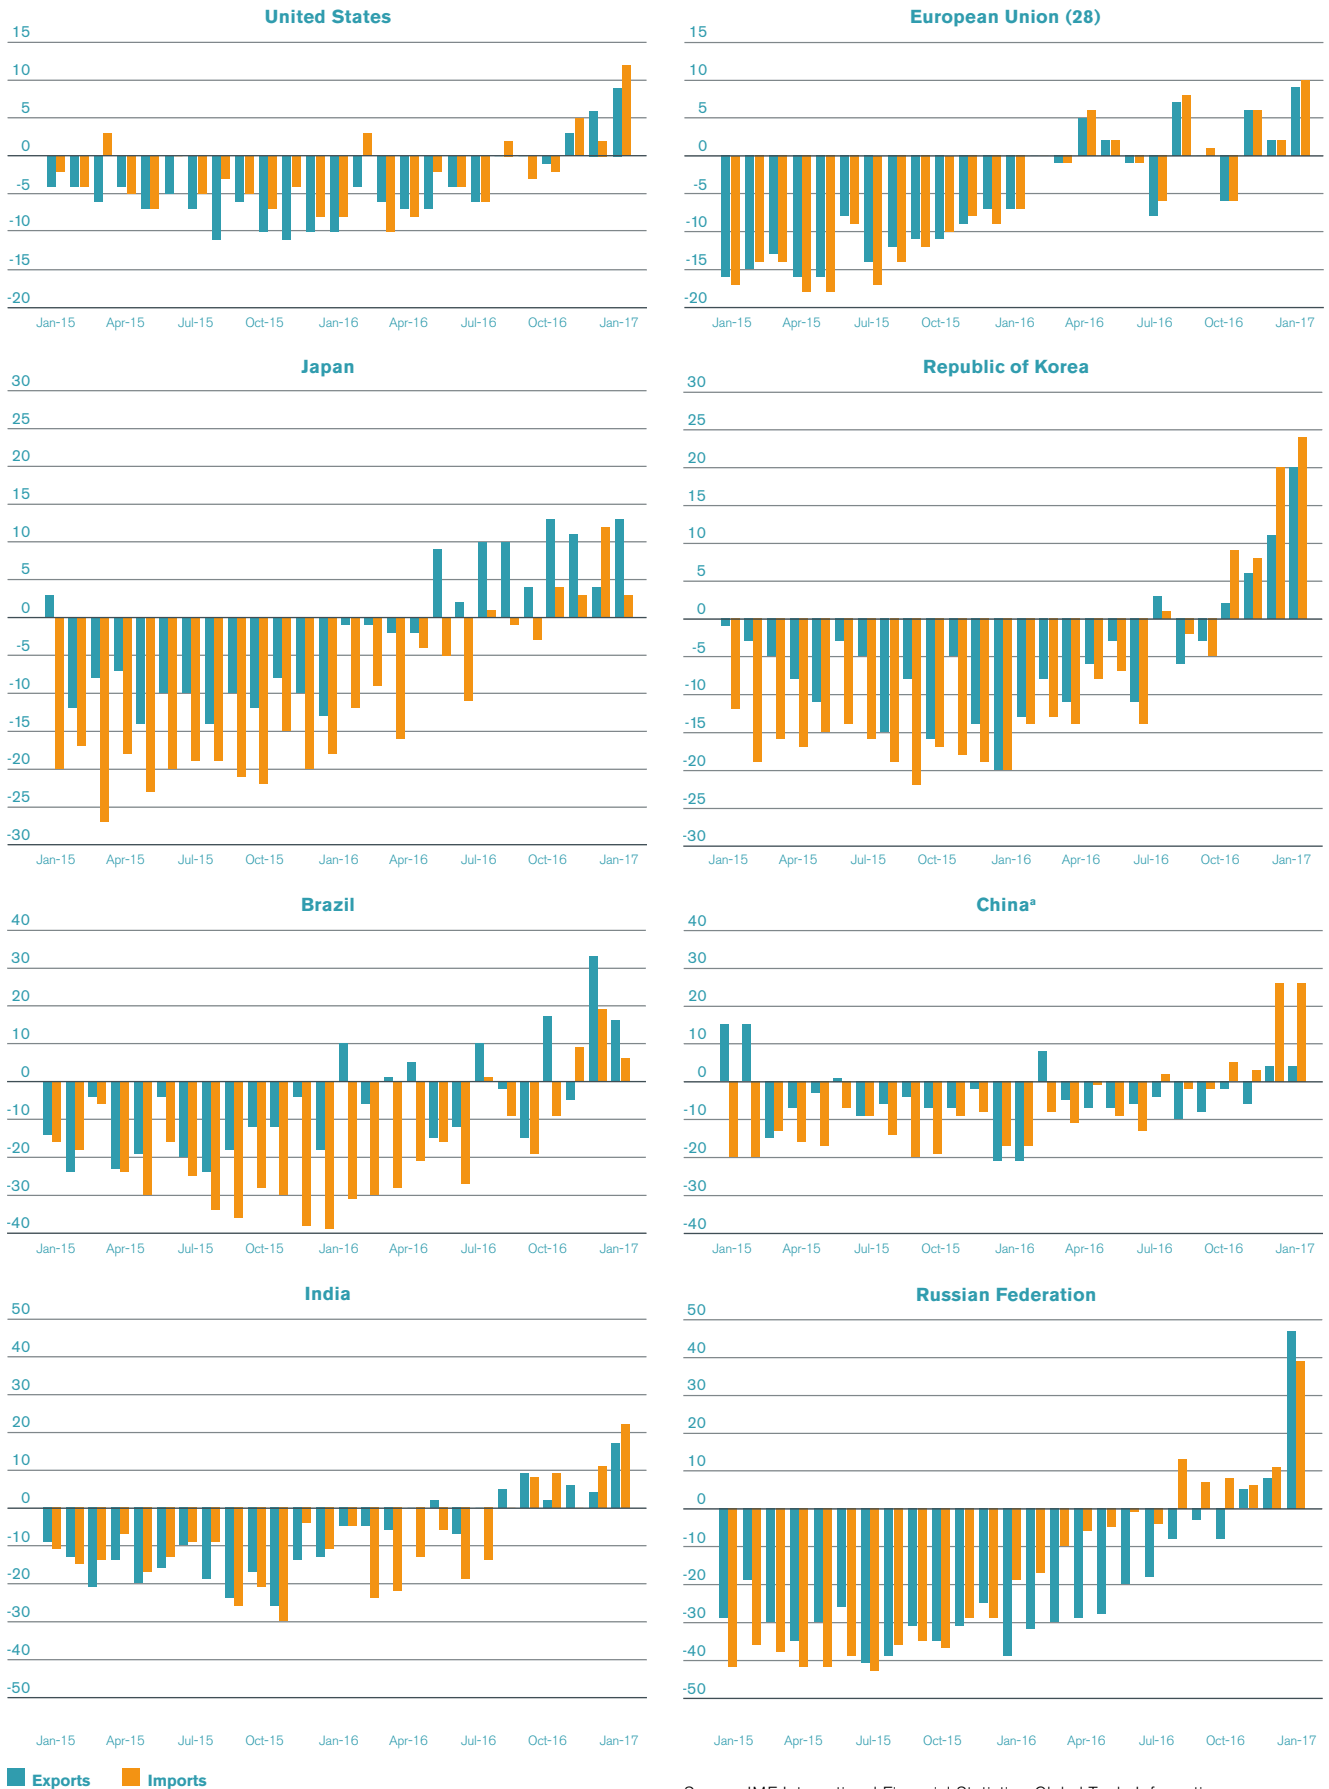

materializing over the course of the year is considerable.

Chart 3.14 shows year-on-year growth in monthly exports and imports of selected major economies up to February of this year. Trade values rose in the early months of 2017 but it is uncertain whether this growth can be sustained throughout the year. Much of the increase can be explained by weakness in trade growth in the previous year rather than strong growth in the current year.

Sources: OECD for the United States and euro area, National Bureau of Statistics and Economist Intelligence Unit for China.

^a January and February averaged to minimize distortions due to lunar new year.

Merchandise trade and trade in commercial services

World merchandise exports fell by 3 per cent in 2016 in value terms. This decrease was mostly caused by the continuing decline in exports of fuels and mining products (-14 per cent in 2016). The marked decline in commodity prices in 2015 mostly halted in 2016, with the exception of energy prices. The export prices of all other major commodity groups, apart from food and beverages, decreased slightly but the decline was less than in 2015.

In 2016, world exports of commercial services were up by 0.4 per cent. Global transport exports continued to fall as subdued trade due to stagnating economic conditions and overcapacity hit the shipping and airline industries. Despite security, safety and health concerns in several locations around the world, global travel receipts rose by 2 per cent reflecting a 3.9 per cent increase in international tourist arrivals worldwide. Expanded intra-regional tourism lifted Asia's travel exports, with Chinese travellers playing a key role. Global exports of other commercial services increased by 1 per cent. Information and communication technology (ICT) services were the most dynamic sector but a digital divide regarding access to and use of ICT technologies hinders Africa's participation in this sector.

Merchandise trade 30

Trade in commercial services 36

Trade in value added terms 43

The challenge of measuring digital trade 45

Merchandise trade

World merchandise exports decreased by 3 per cent

The 3 per cent decrease in value terms of world merchandise exports in 2016 was mostly caused by the strong decline in exports of fuels and mining products (-14 per cent in 2016). However, the decline for this category was less marked than in 2015 (-36 per cent). Exports of manufactured goods decreased slightly (-2 per cent) while exports of agricultural products registered a slight increase (+1 per cent). Exports of manufactured goods totalled US\$ 11.2 trillion in 2016, representing

more than 70 per cent of total world exports in 2016 (see Chart 4.1).

The steep decline in commodity prices recorded in 2015 mostly halted in 2016, with the exception of energy prices (see Chart 4.2). The export prices of all major commodity groups, apart from food and beverages, decreased slightly but on a much smaller scale than in 2015. Prices for food and beverages registered a small increase of 1 per cent. This was mostly due to unfavourable weather conditions in several parts of the world making many of these products more scarce.

The prices of minerals and non-ferrous metals decreased by 5 per cent in 2016 but there was an increase in prices for some commodities, such as tin (+12 per cent), zinc (+8 per cent), lead (+4 per cent) and iron ore (+4 per cent). A fall in prices, however, was recorded for uranium (-28 per cent), nickel (-19 per cent) and copper (-12 per cent). Energy prices fell by 18 per cent, with the highest decline registered by natural gas (-34 per cent). Prices for crude petroleum fell by 18 per cent but coal prices went up by 14 per cent.

Chart 4.1:
World merchandise exports by major product groups, 2016
(Share, %)

European Union remains top exporter of agricultural products

The top six exporters of agricultural products remained unchanged in 2016 (see Chart 4.3). The European Union remains the top exporter (38 per cent of the export market, +1 percentage point compared with 2015). Argentina climbed from tenth to seventh position in 2016. Thailand dropped by one position to eighth place, and Australia dropped from eighth to tenth position. India remained ninth largest exporter as in the previous year.

The top five exporters of agricultural products were also the top exporters of food in 2016 (see Table A15). Three of the top five are net exporters of food (European Union, Brazil and Canada) while two (United States and China) are net importers of food.

Five out of the top ten exporters of agricultural products increased their exports in 2016 compared with a decline in exports for all ten in 2015. The highest annual percentage change in 2016 was recorded by Argentina with an increase of 7 per cent, followed by China (+5 per cent). The greatest decline in exports was recorded by Australia (-6 per cent).

The top ten exporters collectively represented more than 73 per cent of world exports of agricultural exports in 2016.

Russia and Qatar hit by decline in gas prices

The top exporters of fuels and mining products were hit by a decline in prices in 2016. However, the decline (in prices) of 18 per cent was not as marked as the 47 per cent decline recorded in 2015.

Nine out of the top ten exporters saw decreases in their exports of fuels and mining products, with the exception of Australia (+0.4 per cent) which profited from price increases, especially in iron ore and coal (see Chart 4.4). The biggest declines in exports were recorded by the Russian Federation (-33 per cent) and Qatar (-32 per cent) which are more dependent on exports of natural gas than the other top exporters.

The United States became the third biggest exporter of fuels and mining products in 2016, with Saudi Arabia dropping from third to fourth position in 2016. Qatar fell from seventh to tenth place.

Export values of iron and steel drop sharply

The top exporters of iron and steel were hit by low export prices and sluggish demand in 2016. They all saw declines in their exports of iron and steel, ranging from -1 per cent (India) to -15 per cent (United States) (see Chart 4.5).

The European Union remained the top exporter with a 38 per cent share of world exports of iron and steel. The Russian Federation rose from sixth to fifth position in 2016, while India climbed from tenth to eighth place. The United States fell from fifth to sixth position, Brazil from seventh to ninth position and Ukraine from ninth to tenth place.

Swiss exports of chemicals increase by 9 per cent

The top ten exporters of chemicals remained mostly unchanged in 2016 (see Chart 4.6), with the exception of India (rising from ninth to eighth place) and Canada (falling from eighth to ninth position).

Three out of the top ten exporters of chemicals increased their export values, namely Switzerland (+9 per cent), Japan (+4 per cent) and India (+2 per cent). Exports from the Republic of Korea stagnated while exports declined for the other top ten exporters. The greatest decline was recorded by Chinese Taipei (-9 per cent) followed by Canada (-7 per cent).

China's exports of office and telecom equipment fall by 8 per cent

Among the top ten exporters of office and telecom equipment (see Chart 4.7), China recorded the biggest decline (-8 per cent) in 2016. However, it still represents about one-third of world exports of office and telecom equipment. Singapore's exports fell by 5 per cent while the exports of the Republic of Korea declined by 4 per cent. The exports of the European Union and the United States remained at about the same level as in 2015 while a slight increase in exports was recorded by Chinese Taipei (+2 per cent) and Japan (+1 per cent).

EU regains 50 per cent share of world exports of automotive products

The European Union's exports of automotive products increased by 4 per cent in 2016 (see Chart 4.8), reaching a market share of 50 per cent, following a decline in its exports in 2015. Japan remained in second position (with an 11 per cent share of world exports; +8 per cent in 2016) followed by the United States (9 per cent share, -0.5 per cent).

The Republic of Korea fell from fifth to sixth position while Canada did the reverse (rising to fifth place). The ranking of the other top 10 exporters remained unchanged. The highest increases in exports were recorded by Turkey (+15 per cent) and India (+10 per cent) while exports from the Republic of Korea declined the most (-8 per cent).

Viet Nam breaks into top ten exporters of textiles

China remained the top exporter of textiles in 2016 (with a 37 per cent share of world exports) even though its exports declined by 3 per cent. The next biggest exporters were the European Union (23 per cent share; 1 per cent increase in 2016) and India (6 per cent share; -6 per cent) – see Chart 4.9. Pakistan rose from ninth to seventh position while Viet Nam entered the top ten for the first time (2 per cent share; +9 per cent).

Clothing exports of Cambodia and Bangladesh increase by 6 per cent

The top ten exporters of clothing in 2016 remained unchanged. However, Hong Kong (China) fell from fifth to sixth position and India did the reverse, rising to fifth place – see Chart 4.10. China's exports of clothing fell by 7 per cent but it still stayed in top position, representing 36 per cent of world exports of clothing in 2016.

EU exports of clothing increased by 4 per cent in 2016, reaching a market share of 26 per cent. The highest increases were recorded by Cambodia and Bangladesh (+6 per cent for both countries). Exports of China and the United States declined the most (-7 per cent and -6 per cent respectively).

Trade in commercial services

Overcapacity in transport sector leads to decline in exports but recovery is under way

Global exports of transport services continued to decline in 2016, falling by 4 per cent, to US\$ 853 billion, with the largest declines in Africa (-9 per cent) and Asia (-7 per cent). The Middle East was the only region with positive growth, boosted by thriving air transport exports (see Chart 4.11).

World exports of freight transport by sea plummeted by 13 per cent in 2016 (see Chart 4.12). This was due to overcapacity in the shipping industry and weak demand as a result of stagnating economic conditions. In particular, dry bulk shipping recorded its worst year ever. The prices for freight shipping remained exceptionally low before recovering in the last quarter of 2016 due to increased demand. Prices for container shipping followed a similar pattern, improving at the end of the year as the sector started to deal with over-supply.

Subdued trade led to oversupply in the airline industry as well despite a 3.8 per cent rise in airfreight volumes.¹ Overcapacity pushed the prices of airfreight transport downwards. As a result, world exports of freight transport by air contracted by 3 per cent in 2016, similar to the declines recorded for other modes of freight transport, such as railways and roads. More than half of global transport exports relate to international freight transport, largely by sea.²

Growth in international air passenger transport remained strong in 2016 as international routes multiplied (see Chart 4.13). The Middle East posted the highest growth in international

Chart 4.11:
World exports of transport services by region, 2016
(Annual percentage change, %)

Source: WTO-UNCTAD-ITC estimates.

passenger traffic, at 11.8 per cent, almost twice as high as the world average. Commercial airlines recorded international passenger “load factors” – the percentage of seats filled per flight - of almost 80 per cent worldwide, with a peak in Europe of 82.8 per cent. However lower prices, due to increased competition, affected air passenger revenue, which continued to decline in a similar way to cargo revenue.³

Passenger transport receipts account for the largest share of air transport exports. But despite rising international air passenger traffic, world exports of air transport services declined by 2 per cent in 2016.

Chart 4.12:

Chart 4.14:
Quarterly exports of transport services, world and selected leading traders, Q1 2016 – Q4 2016
(Percentage change, year-on-year)

Source: WTO-UNCTAD-ITC estimates.

Overall, 2016 was a challenging year for the transport sector worldwide. However, as global demand and trade recovered in the last months of the year, world exports of transport services gradually bounced back (see Chart 4.14). Data for the first quarter of 2017 from the shipping and airline industries point to robust growth. The index for container shipping throughput of major ports continued to rise as well as international air passenger transport (+7.1 per cent) and air freight transport (+10.9 per cent). Short-term statistics on exports of transport services in leading economies suggest that recovery is under way.

Asia records highest growth in travel earnings

World exports of travel rose by 2 per cent in 2016, reaching US\$ 1,205 billion (see Chart 4.15). These exports measure travellers' expenditure in goods and services during their stay abroad. The increase in 2016 reflected a 3.9 per cent increase in the number of international tourist arrivals worldwide. Although security and health concerns remained an issue in several parts of the world, international tourist arrivals reached 1,235 million in 2016.⁴

Asian economies recorded the highest growth in international tourist arrivals, largely from passengers travelling within the region. This growth was fuelled by enhanced air connectivity and cheaper airfares. Expanded tourism within Asia boosted the region's travel exports, which increased by 5 per cent, the largest rise among all regions. Several leading and emerging Asian exporters saw robust growth rates. Japan's travel receipts rose by 25 per cent, the third consecutive year of double-digit growth. Australia, Thailand and India also recorded strong increases, reflecting a surge in international tourists (see Chart 4.16).

China played a key role in neighbouring economies' tourism growth in 2016. Chinese travellers targeted destinations within Asia, preferring short trips over long-haul travel. China accounted for some 15 per cent of international tourist arrivals in Australia, more than a quarter in Thailand and Japan, close to a half in the Republic of Korea and two-thirds in Macao, China and Hong Kong, China. However, in Hong Kong, China and Macao, China arrivals from China and average expenditure contracted. This translated into a decline in travel

⁴ UN World Tourism Organization, "World Tourism Barometer", March 2017.

exports for both economies. In 2016, China held a 21.8 per cent share of world payments for overseas travel. Despite a recent downward revision of its travel statistics, it remained the second global travel spender behind the European Union.

Other regions benefited from rising numbers of foreign tourists. South and Central America's travel receipts rose by 4 per cent in 2016 sustained by increasing numbers of travellers from the United States despite concerns caused by the outbreak of the Zika virus in several countries. In the Middle East, exports of travel expanded by 3 per cent while the European Union's travel exports rose by 1 per cent as exchange rate fluctuations stabilized following volatility in 2015.

By contrast, Africa's travel receipts fell by 8 per cent due to a slowdown in international tourist arrivals. This was largely the result of a sharp drop in foreign tourists in Egypt following terrorist attacks, with the country's travel receipts contracting by more than a half. In Sub-Saharan Africa, however, growth remained positive. In 2016, travel accounted for almost 40 per cent of Africa's total exports of commercial services.

According to the UN's World Tourism Organization, international tourist arrivals are projected to rise by 3 to 4 per cent in 2017.

High-tech services lead growth in other commercial services in Asia and Middle East

World exports of other commercial services (a category which includes financial services) increased by 1 per cent in 2016, reaching US\$ 2,584 billion, following a 5 per cent drop in 2015 (see Chart 4.17). However, export performance was uneven

among regions. While the Commonwealth of Independent States and South and Central America continued to record significant declines, other regions recorded positive growth. The Middle East was the fastest growing region in 2016 (+5 per cent), boosted by Israel's expanding exports of computer services and research and development (R&D) services.

Chart 4.17:
World exports of other commercial services by region, 2016
(Annual percentage change, %)

Note: "Other commercial services" covers: construction; insurance and pension services; financial services; charges for the use of intellectual property not included elsewhere; telecommunications, computer and information services; other business services; and personal, cultural and recreational services.
Source: WTO-UNCTAD-ITC estimates.

Highly-skilled, knowledge-based services contributed to exports growth in Asia. Receipts of intellectual property charges, financial services, R&D services, and technical and scientific services boosted Japan's exports (see Chart 4.18). In 2016, the country recorded the most rapid growth among leading exporters of other commercial services. In other leading economies in the region, such as India, exports of R&D services increased by 52 per cent while in the Republic of Korea, licence fees for the use of outcomes of R&D rose by 13 per cent.

Information and communication technology (ICT) services was the most dynamic sector among other commercial services in 2016 (see Chart 4.19), growing by 4 per cent to US\$ 493 billion, thanks to 5 per cent growth in the European Union.

Chart 4.18:
Leading exporters of other commercial services, 2016
(Annual percentage change, %)

Source: WTO-UNCTAD-ITC estimates.

Chart 4.19:
World exports of other commercial services by main category, 2016
(Annual percentage change, %)

Source: WTO-UNCTAD-ITC estimates.

Computer services (consisting of hardware- and software-related services and data processing services) represented around 72 per cent of ICT services exports, or US\$ 353 billion, in 2016 according to WTO Secretariat estimates (see Chart 4.20). Telecommunications services (including mobile telecommunications, Internet backbone services and the provision of Internet access) were estimated at 23 per cent of ICT exports. Information services (including database services, such as conception, storage, and dissemination, and news agency services) only accounted for 5 per cent of total ICT exports.

Remarkable technological progress and improved connectivity over recent years have fostered the development of ICT services. Mobile-cellular telephone subscriptions have surged, with virtually everyone in the world having a mobile telephone subscription (99.7 per 100 inhabitants in 2016). The number of Internet users has continued to rise while the prices for telecommunications services, in particular for mobile-broadband, have continued to fall. Technological advances have translated into escalating global exports of ICT services, in particular computer services and information services (see Chart 4.21).

Chart 4.20:
World exports of telecommunications, computer and information services, 2016
(Percentage, %)

Source: WTO-UNCTAD-ITC estimates.

Chart 4.21:
World exports of ICT services, Internet users, and mobile-cellular telephone subscriptions
(Index 2010 = 100)

Source: WTO-UNCTAD-ITC estimates and ITU.

A digital divide hinders Africa's participation in exports of ICT services

World exports of computer services remained very concentrated in certain regions in 2016. Europe, mainly the European Union, accounted for 62.6 per cent of global exports, followed by Asia with 23.5 per cent. Less than 1 per cent of world exports of computer services originated from Africa (see Chart 4.22).

Infrastructural constraints, low rates of access to the Internet and poor

connectivity as well as lack of technological knowledge has hindered the participation of African economies in the most dynamic segment of services trade (see Chart 4.23). A digital divide regarding access to and use of ICT technologies persists between developed and developing regions. As a result developing economies have been marginalized in world trade in services, preventing them from entering fully into new ways of trading goods and services, such as e-commerce and participation in global value chains.

Trade in value added terms

What is the origin of “value added” in agro-industry supply chains?

Global value chains (GVCs) have contributed to the international fragmentation of production, especially in the manufacturing sector where countries and industries specialize in tasks and the production of inputs to a final product. The agro-food sector creates opportunities for developing economies to join GVCs through the production and exchange of agricultural products. Agro-food production chains allow small and medium-sized enterprises (SMEs) to link up with smallholder farms – the core of business networks in emerging economies - so that they can reach out to international markets.

The OECD-WTO Trade in Value Added (TiVA) database provides insights into the origin of the value added contained in gross exports and sheds light on the trade flows that take

place within GVCs. TiVA data rely on the International Standard Industrial Classification (ISIC) that covers all sectors of the economy, including primary products, manufactured goods and services. The ISIC definition for “agro-industry” mainly includes the production, processing and preservation of food products and beverages as well as tobacco products.

Around 70 per cent of the value added in agro-industrial exports in 2011 originated from industries supplying inputs to agricultural firms to produce their exports (see Chart 4.24), according to TiVA estimates. Intermediate products from primary industries, mainly consisting of agricultural inputs, represented 23 per cent of the overall value added in the sector's exports. Inputs from other manufacturing industries such as fertilizers, pesticides, tools and agricultural machinery, represented 10 per cent of this total.

Furthermore, the share of services in the overall value added in agro-industry exports was highly significant, reaching 38 per cent of the total value added in 2011, much more than the value added by the agro-food sector itself (29 per cent). The increasing “servicification” of the agro-industry is due to the fact that services allow the various production units in the value chain to be connected with each other.

Measuring trade in terms of value added highlights the importance of logistics services in food supply chains. This is especially true for supply chains dealing with perishable goods, which are extremely dependent on efficient logistics systems and reliable connections to GVCs. In 2011, the share of transportation and distribution services (including wholesale and retail trade) in world agro-industry exports was estimated at 18.5 per cent while “research and development and other business services” totalled 7.5 per cent.

Chart 4.24:

World exports of agro-industry products – sectoral origin of value added, 2011
(% share in gross exports of agro-industry)

Source: OECD-WTO TiVA database.

Table 4.1:**Geographic value added in agro-industry exports, selected regions and economies, 2011**

(% share in economies' total exports)

Exporter	Value added origin of exports									Total
	EU28	South America	South-East Asia	United States	Canada	Mexico	Japan	China	Other	
EU28	86	1	1	3	0	0	0	1	7	100
South America	2	91	1	2	0	0	0	1	3	100
South-East Asia	3	1	82	2	0	0	2	2	8	100
United States	3	1	1	86	2	1	1	1	4	100
Canada	2	1	1	10	79	1	0	1	4	100
Mexico	1	0	1	10	1	83	0	1	2	100
Japan	1	1	2	2	1	0	87	1	4	100
China	3	3	5	4	1	0	1	75	8	100

Intra-regional or domestic value added origin in agro-industry exports

Source: OECD-WTO TIVA database.

Note: South America includes Argentina, Brazil, Colombia, Costa Rica and Peru.

South East Asia includes Brunei, Cambodia, Hong Kong (China), Indonesia, Republic of Korea, Malaysia, the Philippines, Singapore, Chinese Taipei and Thailand.

The regional groups shown in Table 4.1 illustrate that agro-industry value chains are mainly organized at the regional level. The shares of intra-regional value added in total exports for the European Union, Central and South America and South East Asia were close to or over 90 per cent in 2011.

The United States and the European Union are core suppliers to agro GVCs. This may be partly due to the predominance of US and European multinational enterprises in this sector

and intensive exchanges within their networks of operating subsidiaries. The United States dedicates a large part of its exports of agro products to its regional partners, with Canadian and Mexican exports of agro-industrial products, including around 10 per cent of US value added in 2011.

China tends to be an importer of inputs rather than a supplier of inputs within agro-industry GVCs. Imported inputs represented 25 per cent of China's value added exports from

the agro-industry in 2011. South East Asia alone contributed to more than 5 per cent of the value added in China's agro exports. Food and agribusiness is of increasing importance to South-East Asian economies. For instance, Malaysia, Thailand and Indonesia are among the top exporters of food products in the world, producing and exporting semi-processed agricultural products, such as palm oil, to GVC partners for further processing.

⁵ UN World Tourism Organization, "World Tourism Barometer", March 2017".

The challenge of measuring digital trade

A report on the digital economy commissioned by the UK government in March 2016 suggests that the UK's gross domestic product (GDP) would have grown on average 0.4 to 0.7 percentage points faster in the last decade if the benefits of the digital economy had been fully realised.⁵

New business models and advances in technology have helped to create new ways of achieving efficiency and reducing trade costs for both goods and services. The challenge is to find a way of capturing this digital element in measurements of domestic and cross-border activity.

Terms such as ICT, e-commerce, digital trade and the digital economy are often used interchangeably as the scope of each concept is not fully defined. However, to quantify the impact of each of these concepts it is important to define its scope.

In addition, governments regard these technological advances – or “digitalisation” – as the way of increasing their participation in international trade. Digitalisation is widely seen as a means of helping small and medium-sized enterprises (SMEs) participate more in international trade and facilitating the participation of women in trade. It is often cited when discussing the future prospects of trade and economic growth, and it is central to discussions on automation and to what extent robots or artificial intelligence will affect employment in the future.

Statistics are needed to measure and interpret the impact of digitalisation. Currently, national accounts provide information on the structure and size of an economy in value added terms while international trade statistics on goods and services trade measure trade flows in gross terms. In addition, global supply-use tables link production with trade to measure international trade flows in value added terms.

However, new technology enabling e-commerce or more generally digital trade has an impact on production, domestic trade and international trade. The challenge for the international statistical community is to find a way of capturing these transactions in international trade statistics and subsequently in macroeconomic aggregates. For example, what is the frontier between goods and services for digitised products? Would the General Agreement on Tariffs and Trade (GATT) or the General Agreement on Trade in Services (GATS) be applicable? And how should they be classified in a statistical context? Technology in the form of Internet access has brought an additional layer of complexity to the measurement of international trade. Digital trade allows SMEs to access distant markets and to buy cutting-edge products. It also helps to reduce trade costs by increasing the efficiency of global value chains.

When measuring digital trade flows, it is helpful to categorize them in order to determine how statistical measurement of this activity needs to be developed.

To improve the statistics on digital trade, a number of initiatives are advancing in parallel. However, for the time being, these are mostly concerned with conceptualizing the different aspects of this trade. Although the concept of digital trade has only recently become a prime consideration of the statistical community, a number of related efforts are already proceeding. The Inter-Agency Task Force on International Trade Statistics (TFITS) will coordinate these efforts to seek to avoid duplication and to ensure a common approach within the broader economic accounting framework. Notable initiatives currently under way include collaboration between the OECD and the International Monetary Fund to better measure digitalisation within GDP and productivity measurements, and work being conducted by the United Nations Conference on Trade and Development (UNCTAD), the Universal Postal Union, the OECD and the WTO to measure cross-border e-commerce transactions. Other efforts that the TFITS will build upon include using a definition of ICT-enabled services developed by UNCTAD to help derive data on the value of services delivered electronically across borders.⁶ The TFITS, chaired by the OECD and the WTO and reporting to the UN Statistical Commission, has taken the lead in pursuing how to respond to the challenge of measuring digital trade.

⁶ In March 2016, the UN Statistical Commission endorsed a definition of ICT-enabled services developed by UNCTAD in collaboration with other international organizations.

Trading patterns: Global and regional perspectives

World merchandise trade in value terms fell by 3 per cent in 2016 following a 13 per cent slump recorded in 2015, with trade growth remaining negative or static for the world's leading traders. China remained the top trader but its share of world merchandise trade declined for the first time since 1996. Exporters of commodities, particularly fuels and mining products, continued to be hit by a decline in commodity prices. Europe was the best performing region in 2016, with a flat growth rate in the value of its merchandise trade, compared with a decline of 3 per cent for North America and 4 per cent for Asia.

In services, the Middle East recorded the highest export growth for the fourth consecutive year, thanks to its thriving air transport sector, tourism and IT services. However, in the Commonwealth of Independent States and in Africa, exports of all services categories plunged. African economies recorded a sharp decline in services imports as falling energy prices cut revenues of oil exporters in the region, reducing their capacity to buy services from abroad. The United States remained the world's leading trader of commercial services while the United Kingdom was the second-largest world exporter despite a sharp depreciation of the British pound. China slipped to fifth position in terms of exports but ranked once again as the second-largest services importer. Sustained by high-tech services, Ireland had the best services trade performance among leading traders.

Merchandise trade 48

Trade in commercial services 53

Merchandise trade

Sluggish performance by the leading traders in 2016

China, the United States, Germany, Japan and France were the top five traders for merchandise exports and imports (in terms of value) in 2016, accounting for more than 38 per cent of world merchandise trade.¹ In terms of exports and imports, Netherlands and the United Kingdom ranked fifth and fourth for exports and imports respectively. Imports and exports from the top five traders both dropped by 3 per cent in 2016, compared with a decline of 11 per cent and 7 per cent respectively in 2015.

China's share of world merchandise trade in 2016 declined for the first time since 1996, falling to 11.8 per cent compared with 12.2 per cent in

2015. China's exports totalled US\$ 2.10 trillion, a decline of 8 per cent following a 3 per cent decrease in 2015. Chinese exports made a slow start to 2016, with an initial decline of 13 per cent compared with the same quarter of 2015. On the imports side, a decline of 5 per cent on a year-on-year basis was less marked than the decline of 14 per cent recorded in 2015. In volume terms, import demand from China grew by 3 per cent following a decline of 2 per cent in 2015.

China's trade balance remained positive in 2016 but declined by US\$ 83.2 billion to US\$ 510.7 billion in 2016. This follows an improvement of US\$ 124.0 billion to its trade balance in 2014 and an improvement of US\$ 210.8 billion in 2015. Preliminary data shows that trade surplus in

manufactured goods, which account for more than 96 per cent of China's total exports, reached US\$ 969.8 billion in 2016 compared with US\$ 1.06 trillion in 2015 (see Table A17).

The three top regional destinations for China's exports of manufactured goods in 2015 were Asia (37 per cent share), North America (26 per cent) and Europe (20 per cent). Preliminary data show that on the imports side, demand from China for manufactured goods declined at a pace of 5 per cent in 2016 following a decline of 8 per cent in 2015. Imports of fuels and mining products were affected by the decline in prices of these commodities in 2016 (see Chart 3.2).

The United States exported goods with a value of US\$ 1.45 trillion in 2016

Chart 5.1:
Leading traders and world exports of merchandise trade, 2006-2016
(Indices, 2006 = 100)

Source: WTO Secretariat.

¹ Merchandise trade is defined as the average of exports and imports.

and imported goods totalling US\$ 2.25 trillion. Merchandise exports decreased by 3 per cent, following a decline of 7 per cent in 2015. Agricultural goods, which represented 11 per cent of goods exports in 2016, grew by 3 per cent following a decline of 12 per cent in 2015 (see Table A14). The net trade deficit on goods was lower than in 2015 during the first three quarters of 2016 but a decline during the fourth quarter of the year dragged down GDP growth for 2016 to 1.6 per cent. The US trade balance improved by US\$ 16.0 billion in 2016 following a decline of US\$ 42.5 billion in 2014 and US\$ 20.7 billion in 2015.

The US merchandise trade deficit with developing economies reached US\$ 541.5 billion in 2016, down from US\$ 558.2 billion in 2015. Exports declined 3 per cent to US\$ 809.7 billion, caused primarily by a decline in machinery and transport equipment products. Imports were down 3 per cent to US\$ 1.35 trillion from US\$ 1.39 trillion in 2015.

The United States' two partners in the North American Free Trade Agreement (NAFTA) – Canada and Mexico - received over 34 per cent of all US merchandise exports in 2015 and were responsible for 26 per cent of all US imports.² The United States ran a trade deficit of US\$ 87.7 billion in goods with its NAFTA partners in 2016: US\$ 67.7 billion with Mexico and US\$ 20.4 billion with Canada.³ Over the past two years, US merchandise trade has declined by 4 per cent, compared with average growth of 2 per cent in 2013 and 2014.

Within the European Union, Germany was the largest exporter of goods (totalling US\$ 1.34 trillion) followed by the Netherlands (US\$

569.7 billion) and France (US\$ 501.3 billion). Germany recorded a trade surplus of US\$ 284.8 billion in 2016 compared with US\$ 43.5 billion for the European Union as a whole. Germany remains the main recipient of world exports to the European Union, with imports valued at US\$ 1.05 trillion, or 20 per cent of the EU's total imports. The Netherlands remained the fifth-largest exporter of goods in the world, with a share of 4 per cent of global trade. In terms of imports, the United Kingdom overtook Japan as the world's fourth-largest importer of goods behind Germany, with imports of US\$ 635.8 billion in 2016, an increase of 2 per cent. The United Kingdom accounted for 12 per cent of EU imports in 2016 while France's share was 11 per cent.

Japan was the world's fourth-largest exporter of merchandise trade and fifth-largest importer in 2015, with a 4 per cent share of total trade. Among developed economies, Japan showed the highest exports growth in value and volume terms. Japan's merchandise exports rose by 3 per cent while imports fell by 6 per cent. Export growth in 2016 followed a decline of 9 per cent in 2015, with exports US\$ 20.1 billion higher than in 2015. Growth was largely driven by a recovery in exports of manufactured goods, which account for more than 87 per cent of the country's total exports. The 6 per cent decline in imports was less marked than the 20 per cent decline in 2015. Japan recorded an increase in demand for agricultural and manufactured products following a decline in 2015.

Japan's trade balance was positive in 2016, with a surplus of US\$ 38.0 billion, after recording a deficit of US\$ 23.2 billion in 2015 and US\$ 122.0 billion in 2014.

Overall, Europe is the third-largest destination of Japanese manufactured goods, accounting for 12 per cent of these exports, with Asia and North America representing 53 per cent and 25 per cent shares respectively.² Within Asia-Pacific Economic Cooperation (APEC), Japan represented 8 per cent of the total merchandise trade of the group in 2016.

Europe best performing region in 2016, with steady year-on-year progress

Europe was the best performing region in 2016 followed by Asia and North America. Europe's merchandise exports amounted to US\$ 5.94 trillion, followed by Asia's US\$ 5.75 trillion and North America's US\$ 2.22 trillion. In terms of imports, Europe accounted for US\$ 5.92 trillion while Asia's and North America's imports stood at US\$ 5.21 trillion and US\$ 3.07 trillion respectively. Europe's exports and imports remained flat overall in 2016 compared with a decline of 13 per cent in 2015.

Africa's exports experienced a decline of 12 per cent in value terms in 2016, with oil exporters most adversely affected by lower oil prices. With average annual fuel prices 17 per cent lower in 2016, African oil exporters dragged down the region's performance. Oil exporters recorded a decline of 27 per cent compared with a decline of just 1 per cent for Africa's non-oil exporters.

Among the leading oil exporters, Nigeria saw a decline of 36 per cent while Algeria and Tunisia fared relatively better than the average for this group, recording declines of 16 per cent and 4 per cent respectively in value terms (see Table A58). Conversely, Egypt

² Latest period for which data are available.

³ Preliminary numbers were extrapolated on the basis of data published by UN Comtrade database.

bounced back from the previous year's poor performance, with growth of 19 per cent for its exports. The lacklustre performance of African countries overall was due to a variety of other factors, including slow economic recovery in advanced and emerging economies (notably China), the drought experienced in some African countries as well as the effects of political turmoil, particularly for North African countries.

Asia's merchandise trade continued to deteriorate in 2016 in value terms. The region experienced a decline in exports of 4 per cent. Among the larger Asian economies, India recorded a much less significant decline (-1 per cent) in its exports in 2016 compared with the decline of 17 per cent in 2015. On the imports side, falling fuel prices continued to weigh down the value of its imports in 2016. Developed economies in Asia registered growth

in exports value terms of 3 per cent in 2016 following a decline of 13 per cent in 2015, largely driven by a recovery of Japan's exports. Among the exporters of manufactured goods, Malaysia and the Philippines experienced declines of 5 per cent and 4 per cent respectively (see Table A7).

South and Central America's merchandise exports were down 6 per cent in 2016 as the region remains largely dependent on agricultural and energy commodities and is therefore vulnerable to price movements for these products. Brazil, the world's third-largest exporter of agricultural products in 2016 (see Table A14), experienced a decline in exports of 3 per cent, dragging down the performance of the South American region. Argentina, Costa Rica, the Dominican Republic, Peru and Paraguay achieved positive exports trade growth in 2016.

In the Middle East and the Commonwealth of Independent States (CIS), dependence on commodities continued to weigh down their trade performance. The CIS recorded the worst performance among all regions in terms of exports, registering a decline of 16 per cent. These exports totalled US\$ 418.6 billion while imports reached US\$ 332.6 billion in 2016. Middle Eastern countries recorded exports of US\$ 765.8 billion and imports of US\$ 665.2 billion in 2016.

Regional trade agreements recorded static or declining growth in 2016

NAFTA, the European Union and the Association of South-East Asian Nations (ASEAN) accounted for 58 per cent of global trade in 2016, including 56 per cent of world exports (US\$ 8.73 trillion) and 60 per cent of world imports (US\$ 9.47 trillion). The members of these three regional trade agreements (RTAs) represented 53 per cent of world GDP in 2016⁴, with an average growth rate of 1.9 per cent in 2016 and a market size of 1.6 billion consumers.⁵

However, total merchandise trade for all RTAs remained static or declined in value terms. NAFTA, ASEAN and the European Union recorded a weighted average decline in their merchandise trade of 1 per cent in 2016 compared with a decline of 11 per cent in 2015 (see Chart 5.3).

NAFTA's merchandise trade performance improved compared with 2015 but growth remained negative in 2016. NAFTA's exports stood at US\$ 2.22 trillion while its imports totalled US\$ 3.07 trillion. As a result, it increased its share of world total merchandise trade

Chart 5.2:

from 15 per cent in 2010 to 17 per cent in 2016. Its market size is 484 million consumers.⁵

NAFTA's trade deficit for manufactured goods in 2015 amounted to US\$ 828.2 billion. These goods accounted for 72 per cent of NAFTA's exports and 79 per cent of its imports.² Following three years of growth in import demand for manufactured goods, preliminary figures suggest a decline of 2 per cent in 2016 (see Table A17). Trade within NAFTA represented 50 per cent of exports and 33 per cent of imports. The United States accounted for 66 per cent of NAFTA's total exports in 2016, Canada for 18 per cent and Mexico for 17 per cent.

The European Union's merchandise trade remained static in 2016 following a fall of 13 per cent in 2015 (see

Table A56). The EU's trade surplus reached US\$ 43.5 billion, compared with US\$ 66.5 billion in 2015. EU imports of manufactured goods, which represented 73 per cent of the EU's total imports, remained at the same level as in 2015, a recovery from the decline of 8 per cent in 2015 (see Table A17).

The EU's merchandise trade performed better than in 2015 during each quarter of 2016. The trade deficit for raw materials, food, fuels and mining products is compensated for by exports of manufactured goods, which accounted for 79 per cent of the EU's total exports. Trade within the European Union represents 64 per cent of the EU's total merchandise trade. Within the EU, manufactured goods account for 78 per cent of total trade while food products account for 11 per cent. The

European Union had a market size of 509 million consumers in 2015.⁵

ASEAN gained its highest share of world trade since 2010, accounting for 7 per cent of the world's total merchandise trade in 2016. Exports contracted by 2 per cent in 2016 compared with 10 per cent in 2015 while imports fell by 1 per cent compared with 11 per cent the previous year.

ASEAN's trade balance remained positive at US\$ 62.0 billion in 2016. Exports from ASEAN countries to the Four East Asian traders (Hong Kong, China, the Republic of Korea, Singapore and Chinese Taipei) remained high at 18 per cent of total exports. The persistent weakness of import demand from developed economies for manufactured goods continued to slow down ASEAN's export performance in 2016. The main recipients of ASEAN's exports in 2015 were China (12 per cent of the total), the United States (11 per cent) and the European Union (11 per cent).² ASEAN represented a market of over 630 million consumers in 2015.⁵

In South and Central America, the newly formed Pacific Alliance (Chile, Colombia, Mexico and Peru) accounts for 57 per cent of merchandise trade in the Latin American and Caribbean countries,⁶ compared with a 28 per cent regional share for MERCOSUR (the Southern Common Market) and 11 per cent for the Andean Community (Bolivia, Colombia, Ecuador and Peru). The aggregated trade performance of the RTAs in this region was negative, with a decline of 6 per cent for the exports of MERCOSUR, 5 per cent for the Andean Community and 2 per cent for the Pacific Alliance countries. Trade within these RTAs stood at 14 per cent of total trade for MERCOSUR and 8 per cent for the Andean Community in

⁶Latin America is comprised of South and Central America and the Caribbean, plus Mexico.

Chart 5.4:
Merchandise exports of regional trade agreements (RTAs) by destination, 2015,⁷
(Share, %)

Source: WTO Secretariat.

2015.² The main destination for exports of the Andean Community is still North America (with a share of 30 per cent of exports in 2015), followed by Asian economies, with a 20 per cent share (see Chart 5.4).

In Africa, exports from the Economic Community of West African States (ECOWAS) declined by 20 per cent in 2016, following a 37 per cent decline in 2015. The RTA recorded its largest trade deficit since 2009, amounting to US\$ 16.7 billion, or 11 per cent of its total trade. The region was largely

affected by dwindling demand from developed economies for fuels and mining goods, which account for 62 per cent of ECOWAS exports.

The leading trader in ECOWAS - Nigeria - accounted for a 47 per cent share of the RTA's exports in 2016, followed by Cote d'Ivoire (17 per cent) and Ghana (16 per cent). The group's exports are highly dependent on demand from countries outside the RTA. This dependence remains high compared with other RTAs, accounting for 91 per cent of its total exports.

A more diversified portfolio of exports from the Common Market for Eastern and Southern Africa (COMESA) led to a less severe decline for this RTA of 5 per cent in 2016, with agricultural products accounting for 26 per cent of COMESA's total exports in 2015 and manufactured goods accounting for 27 per cent.² This less marked decline was largely driven by the strong performance of Egypt, its leading trader, which achieved positive growth of 19 per cent for the first time since 2010.

⁷ Rest of the World includes Commonwealth of Independent States including associate and former member states, Middle East, and NES.

Trade in commercial services

Uneven growth across regions

In 2016, world trade in services recovered from its below-average performance in 2015, expanding by 0.4 per cent. However, trade rose unevenly across regions (see Chart 5.5).

For the fourth consecutive year, the Middle East recorded the highest exports growth (+4 per cent), thanks to its thriving air transport sector, tourism and IT services. However, the region remained a net services importer.

Declines in transport, financial services and intellectual property-related services in the United States affected North America's export performance, which recorded sluggish growth. Europe's exports remained static due to contracting exports of transport, travel and financial services. Exports stagnated also in South and Central America, despite rising travel earnings, the most important services category for the region.

In Asia, robust growth in travel and high-tech services offset declining transport receipts, with total exports of commercial services up by 1 per cent. Asia also saw the most rapid rise in services imports as the region's payments for other commercial services and travel abroad increased.

Yet, in some regions services trade did not recover. In the Commonwealth of Independent States (CIS) and, in particular, in Africa, services trade continued to fall as exports of virtually all services categories plunged. Among all regions, African economies recorded the sharpest declines in imports of "other commercial services" and in travel expenditure overseas. Falling energy prices, which further deteriorated in 2016, cut revenues of African oil-exporting countries, the largest services importers in the region, reducing their purchasing power to buy services from abroad.

Services trade recovers for leading traders, booms in emerging economies

In 2016, the United States remained the world's leading trader of commercial services, with US\$ 733 billion worth of exports and US\$ 482 billion of imports. The country had a 15.2 per cent share of global exports and 10.3 per cent of global imports. The other leading traders in 2016 were China, Germany, the United Kingdom, France, Japan, the Netherlands, Ireland, Singapore, and India.

Due to a decline in transport exports and a downward revision of its travel transactions in 2016, China slipped to fifth position in the export ranking from third position in 2015. However, China confirmed its position as second biggest importer of services, with a share in world imports of 9.6 per cent.

Germany's exports bounced back as exchange rate fluctuations in the euro area stabilised following the volatility in 2015. The country ranked third in the world as exporter of services in 2016.

The sharp depreciation of the British pound led to a decline in the United Kingdom's services trade in US dollar terms. However, in national currency, services trade increased by 7 per cent in 2016 and the country retained its ranking as the second-largest exporter of services.

France saw a decline in its exports of "other business services" (a category that includes research and development services (R&D), as well as business, management, professional, technical, and trade-related services), which account for one-third of its services exports. Travel earnings also declined

Chart 5.5:
Trade in commercial services by region, 2016
(Annual percentage change, %)

Source: WTO-UNCTAD-ITC estimates.

due to lower inflows of foreign tourists following recent terrorist attacks. This resulted in an overall 2 per cent reduction in its services exports in 2016.

In India, robust increases in “other business services” offset static growth for exports of computer services, with total exports of commercial services rising by 4 per cent. Rapid growth in imports was due to “other commercial services”, which expanded by 24 per cent in 2016.

Sustained by high-tech services, Ireland recorded the best exports and imports performance among leading traders (see Chart 5.6). In 2016, exports of computer services, largely computer software, were up by 11 per cent. Computer services represent almost half of Ireland’s services exports. Ireland’s growth in imports was driven by higher payments for research and development (R&D) services (+38 per cent).

In 2016, several emerging services exporters in developing regions saw double-digit export growth (see Chart 5.7). Although the export values for some of these countries are still quite small, the trend is encouraging. For some of these economies, such as Sri Lanka, Mongolia and Nigeria, 2016 was already the second or third year of rapid export expansion. International tourism was a key driver of growth for many of these economies.

Commercial presence of African companies on the rise in Zambia

Zambia is among the few developing economies and the first least-developed country to compile detailed inward foreign affiliates statistics (FATS). These statistics provide important indicators of the activities of resident majority-controlled foreign affiliates (MOFAs) of foreign firms (see Chart 5.8). In 2014, the latest available year for data, Zambia hosted 164 MOFAs, which accounted for 16.5 per cent of the country's GDP. MOFAs contribute significantly to domestic employment. Between 2011 and 2014, they created some 21,000 jobs in the country, or 9 per cent of Zambia's total employment.

In 2014, total sales by MOFAs reached US\$ 14.7 billion (+7 per cent). While mining and quarrying made up

the largest share, services activities and construction represented 29 per cent of total sales. Sales by MOFAs engaged in services activities provide the closest measure of Zambia's imports of services through the commercial presence of a foreign firm (mode 3 of the General Agreement on Trade in Services). Wholesale and retail trade, and finance and insurance were the most important services sectors. Transport and information and communication technology (ICT) were the next important but some way behind.

The bulk of MOFAs' sales in Zambia were made by developed economies, in particular Ireland, the United Kingdom, Canada and Switzerland. However, the share of trade with other developing economies, especially sales within Africa, is increasing steadily, with MOFAs from Africa accounting for close to 19 per cent of total sales. South Africa was

the top-ranking developing partner country, followed by Mauritius.

MOFAs established in Zambia exported services totalling US\$ 40 million to other countries, accounting for only 5 per cent of Zambia's total exports of commercial services. They imported services worth US\$ 130 million, representing 8 per cent of Zambia's total services imports. Services exports targeted predominantly Mauritius, while services imports originated from Canada, Singapore and South Africa.

European Union: Services are exported outside the EU mainly through mode 3

Mode 3 - a foreign company setting up subsidiaries or branches to provide services in another country - was the predominant mode of supply for the

Chart 5.8: Zambia: Inward FATS sales by main economic activity and immediate partner country, 2014 (Percentage, %)

Source: Bank of Zambia and I-Tip Services database.

European Union for exports of services outside the EU, according to a recent estimate by Eurostat for 2013 (see Chart 5.9).

With a share of 69 per cent, the value of services supplied through the establishment of a commercial presence abroad was higher than the combined shares of mode 1 (services supplied from one country to another, officially known as cross-border supply), mode 2 (consumers or firms making use of a service in another country, officially consumption abroad) and mode 4 (individuals travelling from their own country to supply services in another, known as the presence of natural persons). A similar pattern was also evident for services imports. Mode 4 was estimated at only 4 per cent of total services supplied to partners outside the EU. However, the distribution of modes of supply by individual EU member countries may vary.

Chart 5.9:
European Union: Total services exports to partners outside the EU, by mode of supply, 2013
(Percentage, %)

Source: Eurostat estimates.

Chart 5.10:
European Union: Services exports through mode 3 and mode 1 to partners outside the EU, 2013
(Percentage, %)

Source: Eurostat estimates.

A breakdown of services exports outside the EU through mode 3 shows that this mode of supply was widely used to export various types of services, ranging from distribution services (wholesale and retail) to ICT services and transport (see Chart 5.10). The largest shares were found in distribution services (20 per cent), other business services (18 per cent) and financial services (16 per cent). By contrast, almost one-third of the value of mode 1 exports consisted of other business

services (31 per cent), followed by transport services (24 per cent) and financial services (17 per cent).

An analysis of distribution by main service sectors shows that mode 1 is predominant in insurance and pension services, charges for the use of intellectual property not included elsewhere (n.i.e.), and other business services (see Chart 5.11). Mode 3 was prevalent in distribution services, construction, financial services,

telecommunications, computer and information services, personal, cultural and recreational services, as well as maintenance and repair services. Mode 2 was dominant in manufacturing services on physical inputs owned by others, including activities such as processing, assembly, labelling, packing on a contract basis, and travel transactions. The largest shares of mode 4 were in computer services, construction and other business services.

Chart 5.11:

Note: Travel excludes the value of goods purchased by non-EU travellers.
Source: Eurostat estimates.

Participation of developing economies in world trade

Developing economies recorded a decline in the value of merchandise trade for the second year in a row, with both exports and imports decreasing by 6 per cent in 2016. A surplus in global supply and a decline in prices for oil products continued to have an impact on the export of fuel products, an important sector for many developing economies. However, the decline recorded for merchandise trade was less severe than the -14 per cent recorded in 2015 for exports and -13 per cent recorded for imports. Merchandise exports from least-developed countries (LDCs) decreased by 6 per cent in 2016, resulting in a slight decline in their share of world merchandise exports, which now stands at 0.94 per cent.

Developing economies' participation in trade in services also slowed in 2016 as exports decreased, largely due to lower transport activity, while services imports stagnated. However, exports of other commercial services, especially in intellectual property-related services and ICT services, continued to expand thanks to developing economies in Asia, which are the leading developing economy exporters. LDCs' share of world exports of commercial services contracted to 0.7 per cent while their share of world imports fell to 1.4 per cent but the performance of LDCs' services trade varied across regions. At present, travel within Asia is the driver of international tourism for LDCs and fuels LDCs' travel earnings.

Developing economies 60

Aid for Trade 71

Developing economies

Weak global demand has a negative impact on developing economies' trade in merchandise goods

The value of merchandise exports from developing economies continued to decline in 2016 from the high recorded in 2014, albeit at a slower pace than in 2015. In 2016, developing economies recorded a 6 per cent decrease in exports of merchandise trade, which totalled US\$ 6,559.8 billion, and a 6 per cent decrease in imports, totalling US\$ 6,278.8 billion (see Table 6.1). This is a slight improvement on the negative growth of -14 per cent recorded in 2015 for exports and -13 per cent recorded for imports. Developing economies' participation in world merchandise trade decreased slightly in 2016 to 42 per cent of world exports and 40 per cent of world imports.

Developing economies in Asia continued to account for the largest share of developing economies' trade in the world, representing 28.4 per cent of total world exports and 25.0 per cent of total world imports. Asian economies with positive growth in 2016 included Viet Nam (7 per cent), Bangladesh (6 per cent) and Cambodia (7 per cent), all largely exporters of manufactured goods. As a regional group, developing economies in Asia recorded a 7 per cent decrease in exports in 2016. China was one of the largest contributors to this slowdown.

Countries in the Middle East and Africa were negatively affected by a global surplus in fuel products and weaker demand globally. Both regions recorded significant declines in trade in 2016. The Middle East, which is primarily an exporter of fuel products, recorded a decline of 9 per cent in 2016 while the eight African oil and gas exporters

(Algeria, Angola, Chad, Equatorial Guinea, Gabon, Libya, Nigeria and Sudan) all recorded large double-digit declines in exports. However, among the top ten exporters in Africa, five achieved positive growth in 2016: Egypt, Morocco, Côte d'Ivoire, Ghana and Botswana. Overall, merchandise exports from Africa contracted by 12 per cent in 2016.

The recession in Brazil continued in 2016, contributing to the overall negative growth of Latin American¹ trade in merchandise goods. Latin American exports contracted by 4 per cent in 2016. Countries with positive growth in merchandise exports in 2016 included Argentina, Peru, the Dominican Republic, Costa Rica and Paraguay. Developing economies in Europe² recorded flat growth in exports and a small decline in imports in 2016 following negative growth for both exports and imports in 2015.

Table 6.1:

¹ Latin America is comprised of South and Central America and the Caribbean, plus Mexico.

² Developing Europe is comprised of Albania; Bosnia and Herzegovina; Montenegro; Serbia; the former Yugoslav Republic of Macedonia and Turkey.

South-South trade

Following years of a steady increase in its share of world trade, South-South trade (i.e. exports from developing economies to other developing economies) has since levelled to 52 per cent in 2015³. Manufactured goods represented 67 per cent of South-South trade in 2015, compared with 60 per cent in 2014, as the share of fuel and mining products in South-South trade decreased from 28 per cent in 2014 to 20 per cent in 2015. The share of agricultural products has been fairly constant, representing 10 per cent of South-South trade in 2015.

Spotlight on Latin America's agricultural exports

Within the last decade, the value of South-South trade in agricultural products has surpassed the value of developing economies' exports of these products to developed economies.

Agricultural exports represent 9 per cent of total exports by developing economies. The largest share of these exports is represented by food products, which totalled approximately 86 per cent of agricultural exports in 2015. Raw materials represented the remaining 14 per cent.

Developing economies in Asia export more agricultural products,

in value terms, to the world than Latin American countries. However, agricultural exports represent a larger share of Latin America's total exports to the world, 24 per cent in 2015 compared with just 6 per cent for developing economies in Asia. The largest proportion of Latin America's agricultural products are exported to Asia (see Chart 6.1)

Growing appetite by Chinese consumers for food imports has maintained steady levels of agricultural imports from trading partners such as Latin America. China's imports of agricultural products have increased to 12 per cent of its total imports, up from 9 per cent in 2010. Forty-six per cent of China's imports of agricultural products come from developing economies, with 22 per cent of its total imports of agricultural products coming from Latin America.

Although Latin America's exports of fuels and mining products to China decreased in value terms in 2015 due to the economic slowdown in China, the value of its agricultural exports to China remained steady. Consequently, agricultural products increased as a share of total exports, reaching 40 per cent of exports to China, up from 34 per cent in 2014.

Brazil and Argentina continue to be Latin America's top exporters of agricultural products. In 2015, 45 per cent of Brazil's agricultural products and 37 per cent of Argentina's were exported to Asia. The share of Brazilian and Argentinean agricultural products exported to Asia has grown in recent years. In contrast, the share of their exports of agricultural products to other Latin American countries has remained flat, in the case of Brazil, or slightly decreased, in the case of Argentina, in recent years.

Chart 6.1:
Latin American agricultural exports to other regions, 2000-2015
(US\$ million)

Note: Latin America comprises South and Central America and the Caribbean, plus Mexico.
Source: WTO Secretariat.

³Origin and destination figures and product group shares discussed here are based on available WTO data on world merchandise trade, published in October 2016. The next update, to be released in October 2017, will include 2016 figures.

The members of the Pacific Alliance (Chile, Colombia, Mexico and Peru), which entered into force on 1 May 2016, constitute four of the top six Latin American traders, the other two being Brazil and Argentina. However, the dominant exports of the Pacific Alliance to Asia are manufactured goods and fuels and mining products rather than agricultural products. Only 8 per cent of Asia's total agricultural imports are from Pacific Alliance members.

Despite this, agricultural exports from the Pacific Alliance to other Latin American countries were lower in value terms than exports of these products to Asia in 2015. Growth in trade within Latin America will be dependent on increased investment in infrastructure improving ties in the region. Trade in agricultural products within Latin America represented 15 per cent of its total agricultural exports in 2015.

Developing economies' participation in trade in services slows down

Developing economies' participation in trade in services slowed in 2016 (see Chart 6.2). Services exports, which had been growing rapidly thanks to the robust performance by developing economies in Asia, contracted. This group's participation in global exports of services decreased to 30.5 per cent in 2016, from 30.8 per cent in 2015.

Developing economies' exports of commercial services reached US\$ 1,466 billion in 2016, down by 1 per cent. Services imports stagnated at US\$ 1,796 and developing economies' share in world imports of services fell to 38.3 per cent.

The main reason for developing economies' declining services

trade was lower transport activity. Transport accounts on average for around 21-22 per cent of developing economies' services exports and 29-30 per cent of their imports. In 2016, developing economies' trade in transport services dropped by 5 per cent as weak merchandise trade flows and resulting overcapacity hit the shipping sector, pushing freight transport prices downwards.

The Republic of Korea's transport exports dropped by 23 per cent, as sea freight transport exports plunged. In China, transport exports were down by 12 per cent and by 6 per cent in Hong Kong, China. However, Singapore continued to record positive growth thanks to sustained cargo and container activity in its port. Developing economies in Asia, the largest transport traders among developing economies, lost US\$ 14 billion in transport revenues overall.

(Percentage, %)

Source: WTO-UNCTAD-ITC estimates.

Developing economies in Asia lead in exports of other commercial services

In contrast to the heavy losses faced by the transport industry, developing economies' trade in other services sectors continued to grow in 2016. In particular, developing economies' exports and imports of other commercial services (a category that includes financial services and other business services) expanded (see Chart 6.3), although at a slower pace than in 2015.

The most rapid growth was recorded in intellectual property (IP)-related services, where receipts for the use of licences and charges were up by 5 per cent and in information and communication technology (ICT) services, which grew by 4 per cent. By contrast, after a decade of double-digit growth, developing economies' construction exports fell by 10 per cent, continuing the downward trend that started in 2015.

Over the last ten years, developing economies' participation in global exports of other commercial services has risen steadily. In 2016, almost one-quarter of world exports of other commercial services originated from developing economies, compared with 17 per cent in 2005.

However, exports are very concentrated, with developing economies in Asia in the leading role. India, China and Singapore were the main contributors in 2016, accounting for two-thirds of the exports recorded by this group. The three economies exported twice as much as the developing economies in the other four regions combined (see Chart 6.4).

Chart 6.5:**Exports of other commercial services by main sector and by developing region, 2016**
(Percentage, %)

Source: WTO-UNCTAD-ITC estimates.

Developing economies in Asia held an 82 per cent share of exports of financial services by developing economies overall in 2016, thanks to Singapore and Hong Kong, China. Asia dominated

also in IP-related services (79 per cent share), sustained by a thriving flow of exports from the Republic of Korea and Singapore. The region's share was also very high in construction, with China and the

Republic of Korea being the largest global constructors on a balance of payments basis. In addition, a strong performance was recorded in other business services, and in ICT services, thanks to India.

In contrast to other services sectors, personal, cultural and recreational services showed a somewhat more even spread of exports across regions. This sector includes audio-visual services and artistic services, such as live performances of artists in concerts and plays in other countries. The wide spread confirms the importance of these services for developing economies as a whole.

Statistics for 2016 confirm that developing economies in Asia have achieved noteworthy success in penetrating global markets (see Table 6.2), especially in services such as ICT and other business services. On the other hand, developing economies in other regions, especially in Africa, are still facing difficulties in participating in international trade in services. Regulatory issues, infrastructural constraints, high trading costs, and lack of skills hinder their participation in trade, and ultimately prevent them from benefiting from services trade-led economic development and poverty reduction.

LDCs' share of world merchandise exports remains below 1 per cent

Merchandise exports of the LDCs decreased by 6 per cent in 2016, declining more than world exports which fell by 3 per cent. This was a relative improvement from 2015, however, when LDC exports dropped by 24 per cent (see Chart 6.6).

The negative performance in 2016 is mostly linked to the fact that LDCs depend to a high degree on exports of fuels and mining products – which continued to be hit by low prices and declining demand (although less marked than in 2015). LDC imports decreased by 3 per cent compared with a 10 per

Chart 6.6:
Merchandise trade of least-developed countries, 2006-2016
(US\$ billion and percentage share, %)

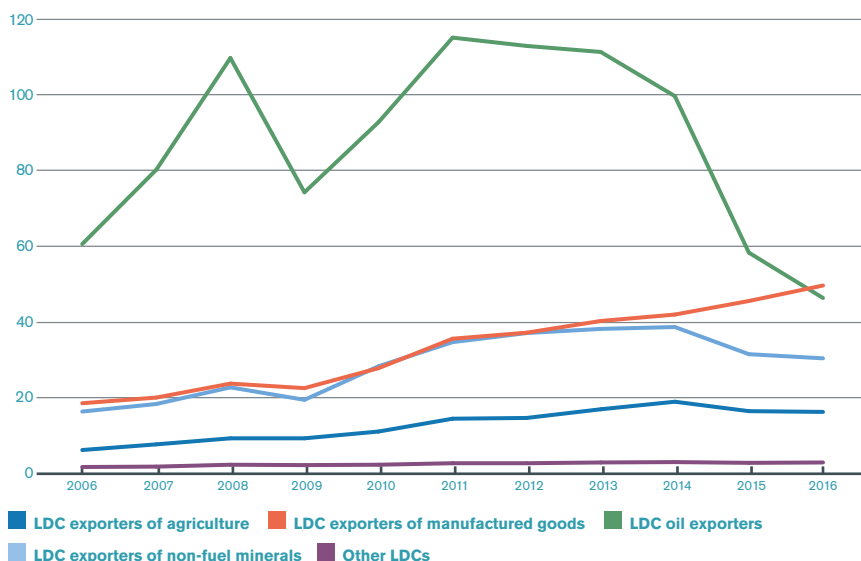

Source: WTO Secretariat.

cent decline in 2015. This resulted in a record merchandise trade deficit of US\$ 83 billion in 2016 compared with US\$ 81 billion in 2015.

LDCs' share of world merchandise exports remained under 1 per cent, falling to 0.94 per cent from 0.97 per cent in 2015 (see Chart 6.6). This continuing decline is also linked to LDCs' dependence on fuel and mining products. Price fluctuations for these products have a greater impact on LDCs' overall export performance than is the case for economies with more diversified exports.

LDCs' share of world merchandise imports remained at the same level as in 2015, namely at 1.4 per cent. Among developing economies, LDCs' share stayed at 2.2 per cent for exports, the

Source: WTO Secretariat.

same percentage as in 2015, while for imports it increased from 3.5 per cent to 3.6 per cent.

The only group of LDCs to achieve growth in 2016 was “exporters of manufactured goods”, which increased by 9 per cent (see Chart 6.7). Agriculture exporters recorded a slightly negative growth rate (-1 per cent), which was a much better performance than the 13 per cent decline in 2015. Stable prices for food and beverages (see Chapter IV) certainly played an important role in this. “Other LDCs” (Djibouti, Senegal and Tuvalu) experienced a 3 per cent decline in exports in 2016, while “exporters of non-fuel minerals” recorded an 18 per cent decline. “LDC oil exporters” experienced the highest decrease (-21 per cent).

Among the top 20 LDC exporters (in terms of export values), the countries with the highest annual growth rates in 2016 were Guinea (+28 per cent, classified as “exporter of non-fuel minerals”), Cambodia (+18 per cent, “exporter of manufactured goods”), Uganda (+12 per cent, “exporter of agriculture”) and Burkina Faso (+10 per cent, “exporter of agriculture”). The four biggest declines in exports among the top 20 were all recorded by oil exporters: Chad (-38 per cent), Equatorial Guinea (-26 per cent), Sudan (-25 per cent) and Angola (-24 per cent).

The LDCs’ overall trade deficit remained at a similar level in 2016 (US\$ 83 billion) as in 2015 (US\$ 81 billion), albeit hitting a record low (3 per cent greater than in 2015). LDC oil exporters experienced a US\$ 11 billion deficit in

2016, almost four times greater than in 2015 (see Chart 6.8), which was the first time in more than 15 years that they had recorded a trade deficit. The greatest deficit was registered by LDC exporters of agriculture (US\$ 33 billion), followed by LDC exporters of manufactured goods (US\$ 22 billion). LDC exporters of non-fuel minerals recorded a negative trade balance of US\$ 13 billion in 2016, a 36 per cent increase on the previous year.

Services in LDCs experience a difficult year

LDCs’ trade in services experienced a difficult year in 2016. Exports of commercial services continued to slow (see Chart 6.9) following a decade of sustained growth. Overall, LDCs’ services exports declined by 4 per cent.

Chart 6.9:
LDCs’ trade in commercial services, 2010-2016
(Annual percentage change, %)

Source: WTO Secretariat.

Chart 6.10:

LDCs' travel exports and international tourist arrivals, 2016
(US\$ billion and million arrivals)

Source: WTO estimates based on UNWTO data and WTO-UNCTAD-ITC estimates.

On the imports side, the decline was more pronounced, at -6 per cent. LDC exports fell to US\$ 32 billion in 2016, according to estimates, while imports fell to US\$ 65 billion. As a result, LDCs' share of global exports of commercial services contracted to 0.7 per cent and to 1.4 per cent of world imports.

All services sectors recorded negative growth in 2016, with travel receipts (the main services export for LDCs) decreasing by 3 per cent. Transport exports declined by 4 per cent as exports stagnated in Ethiopia and Tanzania, the largest exporters. Exports of "other commercial services" were the most affected, with both exports and imports plunging by 9 per cent. Falling commodity prices reduced revenues for LDC exporters, limiting their capacity to import services, in

particular business, professional, and technical services, which fell by 11 per cent.

LDCs' performance in services trade varied significantly by region in 2016. African LDCs, which account for more than half of LDCs' services exports, saw the sharpest declines, decreasing by 5 per cent for exports and 11 per cent for imports.

Asian LDCs saw exports decrease by 3 per cent, largely due to falling exports of "other commercial services" (-12 per cent), while imports recorded double-digit growth (+10 per cent). Travel exports grew by 3 per cent, despite a slowdown in foreign tourists visiting Myanmar, the third-largest tourism exporter in the LDC group. Modest growth of 2 per cent was recorded for

the services imports of LDC islands and a decline of 6 per cent for their exports according to preliminary estimates.

Intra-regional tourism fuels LDCs' travel receipts

Over recent years, the number of international tourist arrivals to LDCs has multiplied, rising from over 10 million arrivals in 2005 to more than 28 million in 2015 (see Chart 6.10). Increasing inflows of foreign tourists and their purchase of goods and services in the countries they have visited has boosted LDCs' travel revenue. In 2016, revenue reached US\$ 17 billion compared with US\$ 5 billion in 2005. As a result, LDCs' share of world travel exports has doubled in ten years, reaching 1.4 per cent of global travel receipts in 2016.

Travellers' expenditure in LDCs brings revenue to a variety of sectors, such as accommodation, food and beverages, transport, retail, recreation and cultural activities, creating employment opportunities in both urban and rural areas. In addition, tourism fosters the development of other sectors, such as agriculture (e.g. food supply to hotels and restaurants), construction, communications, utilities (e.g. the supply of electricity and water to hotels), and conference and events management. Travel exports in LDCs have expanded more rapidly than

exports of manufactured goods and fuels and mining products, their most traded products (see Chart 6.11).

International tourism in LDCs is essentially intra-regional, according to WTO Secretariat estimates based on UNWTO data. In 2015, around 85 per cent of foreign tourists visiting LDCs in Asia originated from neighbouring economies, up from 59 per cent in 2005. In Myanmar, for example, foreign tourists in 2015 came almost exclusively from Asia, with almost half of them from China and more than one-third from Thailand.

In Cambodia, the share of tourists from Asia stood at 77 per cent, with China accounting for 15 per cent and Viet Nam for 21 per cent. China was the main source of foreign tourists to Bhutan (19 per cent) while in Lao People's Democratic Republic half of the tourists came from Thailand. In total, some 4 million Chinese travellers visited LDCs in Asia in 2015, an increase of 52 per cent on average per year since 2011. The increase in travel receipts for LDCs in Asia matches closely the growth of tourist arrivals from Asia in the last ten years. Fuelled by rising

intra-regional tourists, Asian LDCs' travel exports have risen faster than the exports of LDCs in Africa and LDC islands (see Chart 6.12). Consequently, LDCs in Asia increased their share in total LDCs' travel exports to 40 per cent, up from 26 per cent in 2005.

Intra-regional tourists are also the main source of tourists for LDCs in Africa, representing around 63 per cent of travellers in recent years. Tourists from Europe represented on average just over 20 per cent of total arrivals. Although African LDCs comprise more than 30 countries and a population twice as high as Asian LDCs, their travel exports were not significantly higher in 2016. African LDCs are not yet benefiting in the same way as Asian LDCs from the inflows and travel expenditure of Chinese tourists. Although the number of Chinese tourists is on the rise, in 2015 they accounted for only 2 per cent of foreign tourists in Tanzania and Zambia and 1 per cent in Uganda.

Intra-regional travel is therefore a driving force of international tourism in LDCs. However, attracting tourists from other regions through sound policies would open huge growth opportunities for the tourism sector in LDCs. In the case of African LDCs, attracting visitors from China is crucial since it currently represents the largest source of tourists globally and is likely to remain so in years to come.

Aid for Trade

Commitments in 2015 reach almost US\$ 54 billion

Total Aid-for-Trade commitments in 2015 (the latest year for which data is available) totalled US\$ 53.9 billion. Chart 6.13 shows the regional distribution of Aid-for-Trade commitments from bilateral and multilateral donors. Asia and Africa remain the main recipients of Aid for Trade.

The Aid for Trade initiative aims to help developing economies use trade as a means of achieving

economic growth and alleviating poverty. The initiative supports the integration of developing economies – and particularly least-developed countries – into the multilateral trading system by mobilizing international resources to address the constraints experienced by these countries so that they can participate more effectively in global trade and benefit from this activity. One of the key aims of the initiative is to enhance the capacity of developing economies to trade and to take advantage of market access opportunities.

Trade policy developments

This chapter looks into recent developments in governments' trade policies. It draws on notifications provided by WTO members, the WTO's trade monitoring reports, an overview of trends in new trade policy measures implemented by WTO members and on their commitments under the Trade Facilitation Agreement, which entered into force in February 2017.

Trends in trade policy making 74

Trade facilitation 76

Trends in trade policy making

The WTO regularly monitors trade policy developments and has published trade monitoring reports since 2009. These reports aim to enhance the transparency of trade policy developments and to provide WTO members and observers with an up-to-date picture of overall trends in international trade policy-making as well as the implementation of trade-restrictive and trade-facilitating measures. The monitoring exercise was initiated immediately after the onset of the financial crisis at the end of 2008 and has evolved considerably since then.

The latest monitoring report shows that from mid-October 2016 to mid-May 2017 WTO members implemented 74 new trade-restrictive measures, amounting to an average of almost 11 new measures per month. This represents a significant decrease on the previous annual report, which recorded an average of 15 measures per month, and marks the lowest monthly average since 2008 (see Chart 7.1).

Trade-restrictive measures include the introduction of new import or export

tariffs, increases in existing import or export tariffs, the introduction of import bans or quantitative restrictions, the establishment of more complex customs regulations or procedures and local content requirements. The duration of these measures can be temporary or permanent.

During the same period, WTO members introduced 80 measures aimed at facilitating trade, amounting to just over 11 new measures per month. This is the second lowest monthly average since trade monitoring began in 2008 (see Chart 7.2). The trade coverage of the import-facilitating measures (US\$ 183 billion) is more than three times the estimated trade coverage of the import-restrictive measures (US\$ 49 billion) and more than six times higher than those estimated for trade remedy initiations (US\$ 27 billion). Examples of trade-facilitating measures include the elimination or reduction of import or export tariffs, the simplification of customs procedures, the temporary or permanent elimination of import or export taxes and the elimination of quantitative restrictions on imports or exports.

In addition, the trade coverage of import facilitating initiatives during the review period associated with the 2015 expansion of the WTO's Information Technology Agreement (ITA) is estimated at US\$ 99 billion.

The information on trade measures highlighted in the monitoring reports is submitted by WTO members and observers or gathered from other official and public sources. In the latest report, information was submitted by 68 members (counting the European Union and its member states separately), representing more than 40 per cent of

¹ Overview of developments in the International Trading Environment, Annual Report by the Director-General on mid-October 2015 to mid-October 2016, WTO document WT/TPR/OV/19, 21 November 2016. ² For detailed information on notifications of non-tariff measures submitted by WTO Members see also the Integrated Trade Intelligence Portal (I-TIP): <http://i-tip.wto.org/goods>

Chart 7.3:
Trade remedy trends – initiations and terminations (average per month)

the WTO membership and covering over 87 per cent of total world imports. One observer also replied to the request for information.

Initiations of trade remedy investigations in the review period represented 44 per cent of all trade measures taken, with initiations of anti-dumping investigations accounting for around 85 per cent of trade remedy initiations of investigations. WTO members have consistently initiated a

significantly higher number of new trade remedy investigations compared with terminations of trade remedy actions. The monthly average of initiations recorded remained high during the review period, although slightly lower than the peak recorded in 2016. The monthly average of terminations has also fallen during the review period and is at its lowest since 2012 (see Chart 7.3).

The main sectors affected by trade

remedy initiations during the review period were: wood and articles of wood; vehicles; and furniture, bedding material, lamps. The main sectors where trade remedy duties were terminated were: articles of iron and steel; machinery and mechanical appliances; and aluminium and articles thereof. The trade covered by trade remedy initiations and terminations recorded in the report is estimated at US\$ 27 billion and US\$ 6 billion, respectively (see Charts 7.4 and 7.5)

Chart 7.4:
Overview of trade measures, mid-October 2016 to mid-May 2017 (by number)

Source: WTO Secretariat.

Chart 7.5:
Trade coverage of import measures, mid-October 2016 to mid-May 2017 (US\$ billion)

Note: The trade coverage estimates are calculated as the value of imports of the specific product concerned from countries affected by an import measure, by using the UNSD Comtrade database at the six-digit tariff line level. These trade coverage estimates should be treated with caution, as they may be influenced by highly traded goods, exchange rates effects and availability of import statistics or detailed HS codes. Source: WTO Secretariat.

Trade facilitation

The WTO's Trade Facilitation Agreement (TFA) entered into force in February 2017. Ministers had concluded negotiations on trade facilitation at the 2013 Bali Ministerial Conference, when it was decided that the Agreement would take effect once two-thirds of the WTO's members had completed their domestic ratification process and notified the WTO accordingly. This milestone was reached on 22 February, when the threshold of 110 acceptances was surpassed.

The aim of the TFA is to streamline, simplify and standardise customs procedures and to ease the flow of goods across borders. Full implementation of the Agreement is expected to slash WTO members' trade costs by an average of 14.3 per cent.

Chart 7.6 illustrates the timeline for WTO members' ratification of the Agreement. It shows a steady increase in acceptances up to September 2015. A first spike occurred in October 2015, when the European Union deposited its instrument of acceptance for the Union as a whole and its member states. A second steep rise was recorded in the run-up to the Nairobi Ministerial Conference in December 2015.

Ratifications of the TFA are widely distributed across regions and across levels of development. As of 7 April 2017, Europe tops the list (with 36 ratifications), followed by Asia (with 25), South and Central America and the Caribbean (with 20), Africa (with 19), the Commonwealth of Independent States including associate and former member states (with seven), the Middle East (with five) and North America (with three).

The TFA is unique in that it allows developing economies to set their own timetable for implementation depending on their capacity to do so. These economies are also able to indicate what kind of capacity-building assistance they require to implement the Agreement. A Trade Facilitation Agreement Facility has been established by the WTO to help developing economies assess their specific needs and to identify potential development partners.

Developing economies are required to indicate the provisions of the Agreement they can implement immediately ("Category A" commitments), the provisions where they will require more time ("Category B" commitments) and the provisions where they require capacity-building support ("Category C" commitments).

Chart 7.6:
TFA ratification by WTO members: A timeline

Collectively, these commitments provide a roadmap of when the Trade Facilitation Agreement can be expected to be fully implemented by the entire membership.

WTO members had submitted over 100 TFA notifications, especially with respect to Category A, as of end April 2017. Over half of the notifications categorized the majority of the TFA's provisions (almost 80 per cent) as Category A commitments. Notifications regarding categories B and C remain more limited for the time being. As of 7 April 2017, 12 notifications had designated Category B commitments, and eight had specified commitments for Category C. In addition, some developing economies have pledged not to put anything under Category C. Some have also ruled out Category B designations, thereby committing to implement the Agreement in the same way as developed economies.

An analysis of category notifications by region shows that Europe has the highest share of submissions, followed by the Middle East and Latin America (see Chart 7.7). Most notifications were submitted by developing economies, followed by landlocked developing economies and least-developed countries (see Chart 7.8).

Chart 7.7:
Share of Category A, B and C notifications by region (as of April 2017)
(Percentage, %)

Note: Latin America comprises South and Central America and the Caribbean, plus Mexico.

Chart 7.8:
Share of Category A, B and C notifications by economic grouping
(as of April 2017) (Percentage, %)

Source: TFAD (Trade Facilitation Agreement Database) www.tfadatabase.org

³ Developed economies are obliged to implement the entire Agreement from the moment it entered into force (i.e. as of 22 February 2017).

⁴ As of 7 April 2017, 94 WTO members had notified their Category A commitments. Given that these notifications do not apply to developed economies and that LDCs have an additional year to submit their notifications, this indicates that the vast majority of developing economies have already submitted their Category A notifications. Also, some LDCs have already submitted these notifications.

⁵ WTO members are allowed to separate the Agreement's articles into as many sub-sections as they wish when making their notifications. While many members have limited their specifications to full articles of the Agreement or to its sub-sections, some have opted for a greater degree of segmentation.

Composition, definitions & methodology

The data for this report come from a variety of sources. How they are compiled and presented is explained in this chapter.

Composition of geographical and economic groupings	80

Definitions and methodology

Merchandise trade

Exports and imports

Two systems of recording merchandise exports and imports are in common use. They are referred to as general trade and special trade and differ mainly in the way warehoused and re-exported goods are treated. General trade figures are larger than the corresponding special trade figures because the latter exclude certain trade flows, such as goods shipped through bonded warehouses.

To the extent possible, total merchandise trade is defined in this report according to the general trade definition. It covers all types of inward and outward movement of goods through a country or territory including movements through customs warehouses and free zones. Goods include all merchandise that either add to or subtract from the stock of material resources of a country or territory by entering (imports) or leaving (exports) the country's economic territory. For further explanations, see United Nations

International Trade Statistics, Concepts and Definitions, Series M, N° 52, Revision 2.

Unless otherwise indicated, exports are valued at transaction value, including the cost of transportation and insurance to bring the merchandise to the frontier of the exporting country or territory ("free on board" valuation). Imports are valued at transaction value plus the cost of transportation and insurance to the frontier of the importing country or territory ("cost, insurance and freight" valuation).

Table IV.2
Products

A. Primary products
(i) Agricultural products (SITC sections 0, 1, 2 and 4 minus divisions 27 and 28)
of which,
- Food (SITC sections 0, 1, 4 and division 22)
of which,
0 - Food and live animals
1 - Beverages and tobacco
4 - Animal and vegetable oils, fats and waxes
22 - Oil seeds and oleaginous fruits
-- Fish (SITC division 03)
-- Other food products and live animals (SITC sections 0, 1, 4 and division 22 minus division 03)
- Raw materials (SITC divisions 21, 23, 24, 25, 26, 29)
of which,
21 - Hides, skins and furskins, raw
23 - Crude rubber (including synthetic and reclaimed)
24 - Cork and wood
25 - Pulp and waste paper
26 - Textile fibres (other than wool tops and other combed wool) and their wastes (not manufactured into yarn or fabric)
29 - Crude animal and vegetable materials, not elsewhere specified
(ii) Fuels and mining products (SITC section 3 and divisions 27, 28, 68)
of which,
- Ores and other minerals (SITC divisions 27, 28)
of which,
27 - Crude fertilizers, other than those of division 56, and crude minerals (excluding coal, petroleum and precious stones)
28 - Metalliferous ores and metal scrap
- Fuels (SITC section 3)
- Non-ferrous metals (SITC division 68)

B. Manufactures (SITC sections 5, 6, 7, 8 minus division 68 and group 891)

(i) Iron and steel (SITC division 67)

(ii) Chemicals (SITC section 5)

of which,

- Pharmaceuticals (SITC division 54)

- Other chemicals (SITC divisions 51, 52, 53, 55, 56, 57, 58, 59)

of which,

51 - Organic chemicals

52 - Inorganic chemicals

53 - Dyeing, tanning and colouring materials

55 - Essential oils and resinoids and perfume materials; toilet, polishing and cleaning preparations

56 - Fertilizers (other than those of Group 272, i.e Fertilizers, crude)

57 - Plastics in primary forms

58 - Plastics in non-primary forms

59 - Chemical materials and products, not elsewhere specified

(iii) Other semi-manufactures (SITC divisions 61, 62, 63, 64, 66, 69) of which,

61 - Leather, leather manufactures, not elsewhere specified and dressed furskins

62 - Rubber manufactures, not elsewhere specified

63 - Cork and wood manufactures (excluding furniture)

64 - Paper, paperboard and articles of paper pulp, of paper or of paperboard

66 - Non-metallic mineral manufactures, not elsewhere specified

69 - Manufactures of metals, not elsewhere specified

(iv) Machinery and transport equipment (SITC section 7)

- Office and telecommunication equipment (SITC divisions 75, 76 and group 776)

of which,

- - Electronic data processing and office equipment (SITC division 75)

- - Telecommunications equipment (SITC division 76)

- - Integrated circuits, and electronic components (SITC group 776)

- Transport equipment (SITC group 713, sub-group 7783 and divisions 78, 79)

of which,

78 - Road vehicles (including air-cushion vehicles)

79 - Other transport equipment

- - Automotive products (SITC groups 781, 782, 783, 784 and subgroups 7132, 7783)

of which,

781 - Motor cars and other motor vehicles principally designed for the transport of persons (other than public-transport type vehicles), including station wagons and racing cars

782 - Motor vehicles for the transport of goods and special purpose motor vehicles

783 - Road motor vehicles, not elsewhere specified

784 - Parts and accessories of the motor vehicles and tractors

7132 - Internal combustion piston engines for propelling vehicles listed above

- - Other transport equipment (SITC division 79, groups 713, 785, 786 minus sub-group 7132) of which,

79 - Other transport equipment

713 - Internal combustion piston engines, and parts thereof, not elsewhere specified

785 - Motorcycles and cycles, motorized and non-motorized

786 - Trailers and semi-trailers, other vehicles (not mechanically propelled), and specially designed and equipped transport containers

- Other machinery (SITC divisions 71, 72, 73, 74, 77 minus groups 713, 776 minus sub-group 7783) of which,

- - Power generating machinery (SITC division 71 minus group 713)

of which,

71 - Power generating machinery and equipment

minus

713 - Internal combustion piston engines, and parts thereof, not elsewhere specified

- - Non-electrical machinery (SITC divisions 72, 73, 74)

of which,

72 - Machinery specialized for particular industries

73 - Metal working machinery
74 - General industrial machinery and equipment, not elsewhere specified and machine parts, not elsewhere specified
- - Electrical machinery (SITC division 77 minus group 776 and subgroup 7783)
of which,
77 - Electrical machinery, apparatus and appliances, not elsewhere specified and electrical parts thereof
minus
776 - Thermionic, cold cathode or photo-cathode valves and tubes
7783 - Electrical equipment, not elsewhere specified, for internal combustion engines and vehicles; and parts thereof
(v) Textiles (SITC division 65)
(vi) Clothing (SITC division 84)
(vii) Other manufactures (SITC divisions 81, 82, 83, 85, 87, 88, 89 excluding group 891) of which,
- Personal and household goods (SITC divisions 82, 83 and 85)
of which,
82 - Furniture and parts thereof, bedding, mattresses, mattress supports, cushions and similar stuffed furnishings
83 - Travel goods, handbags and similar containers
85 - Footwear
- Scientific and controlling instruments (SITC division 87)
- Miscellaneous manufactures (SITC divisions 81, 88 and 89 minus group 891)
of which,
81 - Prefabricated buildings, sanitary plumbing, heating and lighting fixtures and fittings, not elsewhere specified
88 - Photographic apparatus, equipment and supplies and optical goods, not elsewhere specified; watches and clocks
89 - Miscellaneous manufactured articles, not elsewhere specified
C. Other products: commodities and transactions not classified elsewhere (including gold); arms and ammunition (SITC section 9 and group 891)
9- Commodities and transactions not classified elsewhere in SITC
891 - Arms and Ammunition
D. Intermediate products include all parts and accessories as well as industrial primary and processed intermediate products. The "fuels and lubricants" category (BEC code 3) was excluded.
BEC codes 42, 53, 111, 121, 21, 22

Products

All product groups are defined according to Revision 3 of the Standard International Trade Classification (SITC).

Throughout this report, other food products and live animals; beverages and tobacco; animal and vegetable oils, fats and waxes; oilseeds and oleaginous fruit are referred to as other food products; electronic data processing and office equipment is referred to as EDP and office equipment; and integrated circuits and electronic components is referred to as integrated circuits.

Agricultural products according to the AOA (WTO Agreement on Agriculture) definition refer to HS chapters 1 to 24 (excluding fish and fish products) and a number of manufactured agricultural products (for further information see “The Legal Texts, The Results of the Uruguay Round of Multilateral Negotiations”, WTO). This definition does not correspond to the definition of agricultural products presented in the breakdown of merchandise trade by main commodity group (see table II.1).

Merchandise trade and the goods account in balance of payments statistics

Merchandise trade statistics serve as an input for the compilation of the goods account in the balance of payments (BOP) and the rest of the world account in the System of National Accounts (SNA).

The compilation of international merchandise trade statistics (IMTS) relies principally on customs records complemented, as appropriate, by additional sources to enhance their coverage (for instance, to include

electricity, or trade in vessels and aircrafts). These statistics essentially reflect the physical movement of goods across borders, while National Accounts and BOP statistics record transactions that involve change in ownership.

Goods for processing with or without change of ownership are recorded in merchandise statistics when they enter or leave the economic territory, irrespective of whether a change in ownership takes place. However, goods supplied to another economy for processing without a change of ownership and returned to the economy of the owner after processing are not recorded in the balance of payments statistics compiled according to BPM6; further, if the goods are sold to a third economy after processing, then the value of the goods (including the value of processing) is recorded as an export of the economy of the owner and an import of the third economy; the value of the processing is recorded as an export of services of the processing economy and an import of services of the economy of the owner.

Differences between BOP (BPM6) and national accounts statistics and IMTS can be found in the International Merchandise Trade Statistics: Compilers Manual, Revision 1 (IMTS 2010), Chapter XXIV Section B «Goods to be recorded differently in IMTS and BPM6/national accounts» (p288). (<http://unstats.un.org/unsd/trade/eg-imts/imts2010-final-22march2011.pdf>)

Refer to Table 11.1 (p177) in the Balance of Payments and International Investment Position Compilation Guide (http://www.imf.org/external/pubs/ft/bop/2014/pdf/BPM6_11F.pdf)

Trade in commercial services between residents and non-residents of an economy (BPM6)

Depending on the location of the supplier and the consumer, the General Agreement on Trade in Services (GATS) defines four modes of supply. In addition to the cross-border supply (mode 1), where both the supplier and the consumer remain in their respective home territories, GATS also covers cases where consumers are outside their home territory to consume services (mode 2 – consumption abroad), or where service suppliers are in the territory of the consumers to provide their services, whether by establishing affiliates through direct investment abroad (mode 3 – commercial presence), or through the presence of natural persons (mode 4). An economy's Balance of Payments, namely the services account, can be used to derive estimates covering trade in commercial services for modes 1, 2 and 4. The Balance of Payments does however not include most of the information on services supplied through foreign affiliates that is required to estimate the size of mode 3. A framework for collecting these data, the “Foreign Affiliates Statistics (FATS)” was adopted by the international statistical community for the first time in 2002, and then further developed in 2010. FATS are available in the annual publication World Trade Statistical Review and on the online tool I-TIP services.

Trade in commercial services between residents and non-residents of an economy (BPM6), exports and imports

Exports (credits or receipts) and imports (debits or payments) of commercial services are included in balance of

payments statistics, in conformity with the concepts, definitions and classification of the sixth (2009) edition of the IMF Balance of Payments and International Investment Position Manual (BPM6) as well as the 2010 edition of the Manual on Statistics of International Trade in Services (MSITS 2010).

Definition of commercial services in the Balance of Payments

In the sixth edition of the Balance of Payments Manual, the current account is subdivided into goods, services (including government goods and services, n.i.e.), primary income, and secondary income. Commercial services comprise all services categories except government goods and services, n.i.e. Commercial services are sub-divided into manufacturing services on physical inputs owned by others, maintenance and repair services n.i.e., transport, travel, and other commercial services. The BPM6 contains the following 12 standard services components.

- (1) Manufacturing services on physical inputs owned by others
- (2) Maintenance and repair services, n.i.e.
- (3) Transport
- (4) Travel
- (5) Construction
- (6) Insurance and pension services
- (7) Financial services
- (8) Charges for the use of intellectual property, n.i.e.
- (9) Telecommunications, computer and information services
- (10) Other business services
- (11) Personal, cultural and recreational services
- (12) Government goods and services, n.i.e.

Manufacturing services on physical

inputs owned by others cover processing, assembly, labelling, packing, and similar activities undertaken by enterprises that do not own the goods concerned and are paid a fee by the owner. Only the fee charged by the processor, which may cover the cost of materials purchased, is included under this item. Examples include oil refining, liquefaction of natural gas, assembly of clothing and electronics, assembly, labelling, and packing.

Maintenance and repair services n.i.e. cover maintenance and repair work – by residents – on goods that are owned by non-residents (and vice versa). The repairs may be performed at the site of the repairer or elsewhere. The value recorded for maintenance and repairs is the value of the work done – not the gross value of the goods before and after repairs.

Manufacturing services on physical inputs owned by others and Maintenance and repair services n.i.e. form a new WTO aggregate named Goods-related services.

Transport is the process of carriage of people and objects from one location to another as well as related supporting and auxiliary services. Transport can be classified according to: (i) mode of transport, namely, sea, air, or other ("other" may be further broken down into rail, road, internal waterway, pipeline, and space transport as well as electricity transmission); and (ii) what is carried – passengers or freight. Also included are postal and courier services.

Travel credits cover goods and services – for own use or to give away – acquired by non-residents from an economy during visits to that economy. Travel debits cover goods and services – for own use or

to give away – acquired from other economies by residents of the reporting economy during visits to these other economies. The most common goods and services covered are lodging, food and beverages, entertainment and transportation (within the economy visited), gifts and souvenirs. Travel is further subdivided into: (i) personal travel and (ii) business travel.

The aggregate category Other commercial services corresponds to the following components defined in BPM6:

Construction covers the creation, renovation, repair, or extension of fixed assets in the form of buildings, land improvements of an engineering nature, and other similar engineering constructions such as roads, bridges, dams, and so forth. It also includes related installation and assembly work, site preparation, specialized services such as painting, plumbing, and demolition, and management of construction projects. Construction also covers the acquisition of goods and services by the enterprises undertaking construction work from the economy of location of the construction work. Construction can be divided into (i) construction abroad and (ii) construction in the compiling economy.

Insurance and pension services include services of providing life insurance and annuities, nonlife insurance, reinsurance, freight insurance, pensions, standardized guarantees, and auxiliary services to insurance, pension schemes, and standardized guarantee schemes.

Financial services cover financial intermediary and auxiliary services, except insurance and pension fund services, provided by banks

and other financial corporations. They include deposit taking and lending, letters of credit, credit card services, commissions and charges related to financial leasing, factoring, underwriting, and clearing of payments. Also included are financial advisory services, custody of financial assets or bullion, financial asset management, monitoring services, liquidity provision services, risk assumption services other than insurance, merger and acquisition services, credit rating services, stock exchange services, and trust services. Financial services may be charged for by: (i) explicit charges; (ii) margins on buying and selling transactions; (iii) asset management costs deducted from property income receivable in the case of asset-holding entities; or (iv) margins between interest payable and the reference rate on loans and deposits (called financial intermediation service charges indirectly measured – FISIM).

Charges for the use of intellectual property n.i.e. include: (i) Charges for the use of proprietary rights (such as patents, trademarks, copyrights, industrial processes and designs including trade secrets, franchises); these rights can arise from research and development, as well as from marketing; and (ii) Charges for licenses to reproduce or distribute (or both) intellectual property embodied in produced originals or prototypes (such as copyrights on books and manuscripts, computer software, cinematographic works, and sound recordings) and related rights (such as for live performances and television, cable, or satellite broadcast).

Telecommunications, computer and information services cover (i) Telecommunications services,

which encompass the broadcast or transmission of sound, images, data, or other information by telephone, telex, telegram, radio and television cable transmission, radio and television satellite, electronic mail, facsimile, and so forth, including business network services, teleconferencing, and support services; (ii) Computer services consisting of hardware- and software-related services and data-processing services; (iii) Information services including news agency services, such as the provision of news, photographs, and feature articles to the media as well as database services.

Other business services include (i) Research and development services, (ii) Professional and management consulting services and (iii) Technical, trade-related and other business services. (i) Research and development services consist of services that are associated with basic and applied research, and experimental development of new products and processes. (ii) Professional and management consulting services include (a) legal services, accounting, management consulting, managerial services, and public relations services; and (b) advertising, market research, and public opinion polling services. (iii) Technical, trade-related, and other business services include: (a) architectural, engineering, and other technical services; (b) waste treatment and depollution, agricultural, and mining services; (c) operating leasing services; (d) trade-related services; and (e) other business services n.i.e.

Personal, cultural, and recreational services consist of (i) Audiovisual

and related services and (ii) other personal, cultural, and recreational services.

(i) Audiovisual and related services cover services and fees related to the production of motion pictures (on film, videotape, disk, or transmitted electronically, etc.), radio and television programs (live or on tape), and musical recordings. (ii) Other personal, cultural, and recreational services include (a) health services, (b) education services, (c) heritage and recreational services, and (d) other personal services. Health services as well as education services are provided remotely or on-site. Data on exports and imports of total services (including government goods and services n.i.e), other services (including government goods and services n.i.e) as well as government goods and services n.i.e. are available as memorandum items in the WTO online Statistics Database.

Memo items:

- Total services (Commercial services plus Government goods and services n.i.e)
- Other services (Other commercial services plus Government goods and services n.i.e)
- Government goods and services n.i.e

Government goods and services n.i.e. cover: (a) goods and services supplied by and to enclaves, such as embassies, military bases, and international organizations; (b) goods and services acquired from the host economy by diplomats, consular staff, and military personnel located abroad and their dependents; (c) services supplied by and to governments and not included in other categories of services.

Statistics on international trade in services are produced jointly and published simultaneously with UNCTAD and ITC.

Regional and world estimates for 2015 for sub-item of other commercial services should be considered as preliminary.

Coverage and comparability

While many economies worldwide have fully implemented the BPM6 for the recording of their Balance of Payments services transactions, some are still compiling their statistics according to the BPM5 methodology. Consequently, comparability and coverage of data may not always be complete. It should be noted in particular that world and regional estimates of trade in new services items such as Manufacturing services on physical inputs owned by others and Maintenance and repair services n.i.e. may be underestimated, as some economies do not report these items yet.

While the coverage and comparability of trade in services statistics have improved significantly over the years, the data remain subject to recognized limitations, such as i) certain countries do not collect figures for all items, ii) statistically capturing some services items remains difficult (more notably on the imports side), iii) data can be reported on a net rather than gross basis, iv) certain transactions may prove complex to classify appropriately, v) different sources, data collection and estimation methods lead to diverse results, etc. These distortions are more significant on detailed items levels and may lead to considerable asymmetries among countries' reported trade flows by origin and destination.

Foreign Affiliates Statistics

The new statistical framework on Foreign Affiliates Statistics (FATS) is developed in the Manual on Statistics of International Trade in Services 2010, the OECD Benchmark Definition of Foreign Direct Investment and the OECD Handbook on Economic Globalisation Indicators. The statistical framework covers both goods and services producing enterprises.

It analyses the universe of affiliates for which foreign investors own more than 50 per cent of the voting power or equity interest.

Depending on the compiler's view, one can distinguish inward FATS, that is, activities of foreign-owned affiliates in the compiling economy, or, outward FATS, that is, foreign affiliates of the compiling economy active abroad. Variables such as sales, value added, number of employees, etc. are used to describe the affiliates' activities. These variables are broken down by country of origin or destination of investments and also by type of primary activity of the affiliates. The United States also provide a breakdown into total supply of goods and total supply of services products. In the case of services industries the concept of supply (or output) is based on measures that better capture service output (i.e. the margin). This mainly has an impact on the measurement of activities of wholesalers and retailers, insurers and financial intermediaries.

From a GATS perspective, the size of mode 3 in a given country can be approximated through the value of the output (or supply) of services by foreign-owned affiliates.

In the absence of data on output, sales of services are used.

FATS are currently available mainly for OECD and a small number of non-OECD economies. Given the recent development of these statistics, comparability and coverage of individual economy data may not always be complete. Availability of detailed data and long-time series varies considerably between economies.

Trade in global value chains

The measurement of trade in value added terms traces the source of the value added, by country and industry that is contained in the products (goods and services) traded across the world.

Value added is defined as the value that is added by industries to produce goods and services. In a national account sense, it reflects the compensation of labour, capital, non-financial assets and natural resources used in the production as well as net indirect taxes, when relevant.

The value added approach reflects the interconnection of economies and sectors as well as the increasing importance of trade in intermediate inputs that takes place among international supply and production chains. It provides insights on where the value added comes from and thus on the actual contribution of trade to economies.

Trade in value added indicators are estimates based on Inter-Country Input-Output (ICIO) tables. ICIO tables cover both goods and services. They regroup national Input-Output tables and international trade statistics into a consistent framework to describe sale and purchase of goods and services

between producers and consumers from various economies and industries. They enable to disentangle domestic and foreign value added in each economy and industry.

Trade in value added estimates presented in this publication are sourced from the OECD-WTO "Trade in value added" (TiVA) database and the OECD ICIO table. The latter covers 57 economies plus a "rest of the world" aggregate. Industries are regrouped into 37 sectors and cover productive activities in the primary, secondary and tertiary sectors classified according to the International Standard Industrial Classification (ISIC) Revision 4.

The decomposition of gross exports into their value added components

The breakdown of conventional export data (gross) into their value added components allows showing the role played by economies in global value chains.

The **domestic value added content of exports** is composed of the following indicators:

- (i) The domestic value added, embodied either in final or intermediate goods/services, directly consumed by the importing country. This represents a one-to-one country transfer of value added, with exported goods/services crossing borders only once.
- (ii) The domestic value added contained in intermediates exported to a first country which re-exports them to a third country as embodied in others goods/services. This indicator represents a one-to-many

country transfer of value added, when exported goods/services cross borders more than once.

- This illustrates the level of participation of an economy within international production.
- (iii) The domestic value added of exported goods/services which is eventually re-imported by the country itself. Such a value added round-trip between two countries highlights the domestic value added content present in a country's imports.

The **foreign value added content of exports** corresponds to the value added of inputs that was imported in order to produce intermediate or final goods/services to be exported. It can also be referred to as vertical specialization, when expressed in percentage.

The sectoral value added contributions to gross exports

Exports from a (domestic) industry do not only contain value added produced within the same industry but also value added sourced from other industries within the economy or from other economies.

The value added approach to estimate trade flows can describe both the geographical and sectoral origin of the value added contained in gross exports of any given industry. Table IV.3 presents the value added origin (columns) of gross exports (rows) according to the domestic and foreign source and by main sector. This highlights the extent of the global value chains phenomenon and outlines the interconnection and related dependency across countries and sectors for the production and trade of goods and services.

Other definitions and methods

Annual changes

Throughout this report, average annual percentage changes are analogous to compound interest rates. In calculating the average annual rate of change between 2010 and 2015, for example, data for calendar year 2010 were taken as the starting point, and data for calendar year 2015 as the end point.

Prices

Commodity price movements are primarily described by indices largely based on spot market prices, and therefore exclude transactions governed by longer-term contracts. Price indices for such commodities as food, beverages, agricultural raw materials, minerals, non-ferrous metals, fertilizers and crude petroleum are obtained from IMF Primary Commodity Prices (May 2016 release). Aggregates for all primary commodities and for non-fuel primary commodities are calculated using IMF weights (Statistical appendix table A67). Beginning with the first quarter of 2011, the crude oil price is computed excluding West Texas Intermediate (WTI), which accounts for one third of the IMF's crude oil index. The price of WTI became largely dislocated from international markets in early 2011 and is thought not to represent well prices in international oil trade. For more information, see Box Comm.1 of the World Bank's Global Commodity Market Outlook, January 2012 (see page 65 of the complete report on <http://go.worldbank.org/W18LCZ6PT0>). Export and import prices by commodity

group of Germany, Japan and the United States are sourced from national statistics. Aggregates are calculated by weighting the countries' price indices with the export and import values of the countries' respective base year (Statistical tables A68 and A69).

World merchandise trade indices

The volume indices and the deflators (i.e. price indices or unit values) are taken from a range of different international and national sources. The reported deflators and volume indices may not always be available for the most recent years or may differ in product coverage from the corresponding value indices.

Aggregation of the indices to obtain a world total is a two-tier process. First, export and import deflators from national and international sources are complemented with Secretariat estimates for missing data. They are then aggregated to obtain regional totals. The volume index for each region is obtained by dividing the respective trade value index for each region by the corresponding regional deflator.

Second, the total world merchandise volume index is obtained by deflating the world trade value with the aggregate of regional deflators. Throughout the aggregation process trade values of the previous year are used as weights.

World gross domestic product

World GDP growth is estimated as a weighted average of individual economies' real GDP growth. The weights used are shares of the economies' previous year GDP at 2005 constant prices converted to dollars at market exchange rates.

The use of official exchange rates which are not market-based for some major economies, together with the fluctuations of the United States dollar vis-à-vis major currencies, can have a significant impact on the weighting pattern. The increasing use of weights based on purchasing power parities (PPP) by other international organizations is meant to attenuate "anomalies" linked to these factors. In a period of widely diverging growth rates among countries and regions, the choice

of the weighting pattern can have a marked influence on the global growth estimate. For the 2000-2011 period, global growth estimates based on PPP-weights indicate a significantly faster growth than estimates using weights based on GDP data measured at market exchange rates. This is because of differences in the two weighting patterns.

Re-exports and re-imports

Under the system of general trade adopted in this report, re-exports are included in total merchandise trade.

However, in the case of Hong Kong, China, the magnitude of its re-exports (amounting in 2016 to \$491 billion), if included in regional or world aggregates, would adversely affect the analytical value of the statistics by introducing a significant element of double counting. Therefore, Hong Kong, China's re-exports are excluded from the world, Asia and developing economies aggregates (unless otherwise indicated); only Hong Kong, China's domestic exports and retained imports are included in the totals.

Trade policy indicators

Indicators tracking the changes in the application of trade policy measures can be broken down into three broad categories:

- (1) Customs related measures: Information on customs duties (bound, applied and preferential) can be found on the WTO website and also in a summary form in the World Tariff Profiles. Information on the changes in customs duties can be derived from the above sources but these changes are also covered by the Trade Monitoring reports (TM).
- (2) Trade remedies: Binding tariffs and applying them equally to all trading partners (most-favoured-nation treatment) are key to the smooth flow of trade in goods. The WTO agreements uphold the principles, but they also allow derogations in some circumstances. Those “trade remedies” cover antidumping, countervailing duties and safeguards; the relevant information can be found in the I-TIP database and also in the TM database.
- (3) Technical measures / regulations: By far a persistent growth in notifications happened in the area of

regulations and standards which fall under the SPS and TBT agreements. Keeping up to date with these measures is crucial for all trading partners. Notifications in this area are not easily comparable as to the trade impact of the respective measures announced and the number of notifications may overestimate the actual implementation of the measures.

For each of these three categories, the secretariat compiles indicators showing the measures that were introduced or modified in the year and, when applicable, the stock of these measures. WTO Members have established two main ways of obtaining the relevant information on trade policy measures, one being the system of notifications and the other one being the trade policy reviews' reports and, related to it, the trade monitoring reports. Through notifications, WTO members and observers provide the Secretariat with recent relevant information on trade and trade-related measures. In the trade monitoring context, the Secretariat in addition to information received by WTO members and

observers, collects trade and trade-related measures from other relevant sources and subsequently submit it to the relevant member for verification.. The preparation of the trade monitoring reports is an on-going activity and a unique process relying on continuous dialogue and exchange with WTO delegations as well as divisions within the WTO Secretariat. The WTO-wide trade monitoring reports are subsequently discussed at meetings of the WTO's Trade Policy Review Body. The verification process is a unique feature of the WTO's monitoring efforts and represents a quality control mechanism, allowing members to check the accuracy of the information before it is made public.

Information contained in Members' notifications is now in large parts included in a consolidated database platform, the Integrated Trade Intelligence Portal (I-TIP, weblink). For information on the Trade policy monitoring reports see: (Trade Monitoring database, <http://tmdb.wto.org/>), WTO Docs online (https://docs.wto.org/dol2feStaff/Pages/FE_Search/FE_S_S001.aspx).

Specific notes for selected economies

Merchandise trade statistics of the European Union

Beginning with the 2002 report, EU data compiled according to national statistical practices have been replaced, starting 1993, with data compiled by Eurostat in accordance with EU legislation. The concepts and definitions adopted by the EU are in line with the United Nations' International Trade Statistics, Concepts and Definitions, Series M, N° 52, Revision 2. As a result, the conceptual differences between EU member states' data have been substantially reduced. Moreover, for the EU as a whole, Eurostat data are more timely than the previous source, thus reducing substantially the amount of estimation included in the EU aggregate.

Since January 1993, statistics on the trade between the member states of the EU have been collected through the "Intrastat" system (see GATT 1994, International Trade Trends and Statistics). The coverage of this system, which relies on reports submitted by firms for transactions above a minimum value, is not as wide as the previous one, which was based on

customs declarations. This is particularly noticeable on the import side. For example, prior to the adoption of the Intrastat system, reported intra-EU imports (c.i.f.) closely matched reported intra-EU exports (f.o.b.). However, from 1993 onwards, the reported value of intra-EU imports has been on average around 3 per cent lower than the value of intra-EU exports, indicating a substantial under-reporting of intra-EU imports. As a result of this inconsistency, the Secretariat has substituted intra-EU exports data for intra-EU imports at the aggregate EU level when estimating regional and world totals. However, this adjustment is not allocated between EU member countries. Hence, the sum of reported imports of individual EU members does not add to the figure for EU imports as a whole. This adjustment is also reflected in the volume estimates for the EU as a whole.

Major breaks in data continuity of merchandise trade

Beginning 2003, Singapore includes merchandise trade with Indonesia. Beginning 2008, Indonesia's

imports are reported according to the general trade system.

With respect to the Russian Federation, considerable uncertainty remains about the accuracy of foreign trade statistics, especially as regards imports. A large proportion of the reported data on imports consists of official estimates of inflows of goods which enter the economy without being registered by the customs authorities. Such adjustments to import data accounted for 6 per cent of the officially reported totals in 2012; 8 per cent of the officially reported totals in 2013.

As of 2012, data on merchandise trade values for Switzerland includes trade in gold. Merchandise trade flows between the European Union member States include trade associated with fraudulent VAT declaration, which concerns mainly office and telecommunications equipment. Between 2006 and 2007, intra-EU merchandise trade statistics have been particularly affected by a considerable reduction in this fraudulent trade in the United Kingdom.

Statistical sources

Most frequently used sources for statistics are:

EUROSTAT, Comext and on-line databases
FAO, FAOSTAT Agriculture database
FAO, Production Yearbook
IHS Markit, Global Trade Atlas database
IMF, Balance of Payments Statistics
IMF, International Financial Statistics
IMF, World Economic Outlook database
OECD, Main Economic Indicators
OECD, Measuring Globalisation: The Role of Multinationals in OECD Economies
OECD, Monthly Statistics of International Trade
OECD, National Accounts
OECD, Statistics on International Trade in Services
OECD/IEA, Energy Prices & Taxes
UNECE, Economic Survey of Europe
UNECLAC, Overview of the Economies of Latin America and the Caribbean
UNIDO, National Accounts Statistics Database
UNSD, Comtrade database (for OECD members the UNSD-OECD Joint Trade Data Collection and Processing system)
UNSD, International Trade Statistics Yearbook
UNSD, Monthly Bulletin of Statistics
UNSD, Servicetrade database
World Bank, World Development Indicators

These sources are supplemented by national publications and other international databases and Secretariat estimates.

Figures for total merchandise trade are largely derived from IMF, International Financial Statistics. Data on merchandise trade by origin, destination and product are mainly obtained from Eurostat's Comext database, the Global Trade Atlas and UNSD's Comtrade database. Some inconsistencies in the aggregate export and import data for the same country or territory between sources are inevitable. These can be attributed to the use of different systems of recording trade, to the way in which for example IMF and UNSD have converted data expressed in national currencies into dollars, and revisions which can be more readily incorporated in the IMF data.

Statistics on trade in commercial services are mainly drawn from the IMF Balance of Payments Statistics or from the Trade in Services by Partner Country dataset of the OECD. Data for European Union members, as well as the EU(28) aggregate are drawn from Eurostat's on-line database. For other economies that do not report to the IMF (e.g., Chinese Taipei) data are drawn from national sources.

Estimations for missing data are mainly based on national statistics. GDP series in current dollars are mainly derived from the IMF World Economic Outlook database.

Acknowledgements are due to the Food and Agriculture Organization, the International Monetary Fund, the Organisation for Economic Co-operation and Development, the Statistical Office of the European Communities, the United Nations Economic Commission for Europe, the United Nations Economic Commission for Latin America and the Caribbean, the United Nations Statistics Division, the United Nations Industrial Development Organization, the World Intellectual Property Organization and the World Bank whose assistance in supplying advance information has greatly facilitated the work of the Secretariat. Acknowledgements are also due to national institutions for providing advance statistics.

Closing date for merchandise trade statistics (Customs basis) is 11 March 2017 and commercial services (Balance of Payments basis) is 30 April 2017. For foreign affiliates trade in services statistics the closing date is 10 May 2017.

intra-EU (28) trade)	3640203	4257373	4908085	3867023	4520183	5450667	5638801	6012173	5822779	5108618	5001733

Note: Breaks in the continuity of the value series for particular countries and regional groupings are indicated by an 'I'. They result mainly from changes in the methods of collecting and reporting merchandise trade statistics.

It should be noted that the World and Asia totals contain a significant element of double counting due to the use of the general system of recording merchandise trade statistics which includes re-exports.

Recent figures for a number of countries and territories have been estimated by the Secretariat.

^a Includes significant re-exports.

A59. World merchandise imports by region and selected economy, 2006-2016

Europe (excluding											
intra-EU (28) trade)	4192082	4889840	5737265	4262608	5028801	5988934	5952389	5913240	5819923	5005740	4957051

Note: Breaks in the continuity of the value series for particular countries and regional groupings are indicated by an '!'. They result mainly from changes in the methods of collecting and reporting merchandise trade statistics.

It should be noted that the World and Asia totals contain a significant element of double counting due to the use of the general system of recording merchandise trade statistics which includes re-exports.

Recent figures for a number of countries and territories have been estimated by the Secretariat.

a Includes significant imports for re-export.

b Imports are valued f.o.b.

A60. World exports of commercial services by region and selected economy, 2006-2016

Excluding wholesale and retail trade as well as repair activities. Unless otherwise specified:

- all or a large part of financial service activities are excluded;
- all or a large part of community, social and personal services activities are excluded;
- insurance activities and/or activities auxiliary to financial and insurance activities are included.

* Data for 2012 for Israel, New Zealand and Viet Nam refer to 2011.

- a Insurance activities and activities auxiliary to financial and insurance activities are not covered.
- b Financial service activities are included.
- c Community, social and personal services activities are included.
- d Real estate activities are not covered.
- e Includes other income.
- f Insurance activities and activities auxiliary to financial and insurance activities are not covered in 2014.
- g Output instead of sales.
- h Fiscal year as reference period.
- i No estimation for non-response.
- j Insurance activities and activities auxiliary to financial and insurance activities are not covered in 2013.
- k Excludes real estate activities from 2013. Excludes accommodation and food service activities in 2014.

l Up to 2012, it refers to the sales by foreign affiliates which are established in the EU (28) and controlled by non-EU (27) entities.

Note: Given the recent development of this statistical framework, comparability and coverage of data may not always be complete. See the Metadata.

Excluding wholesale and retail trade and repair activities.

* Data for 2012 for Israel refer to 2011.

a Classified under services according to activity of parent company.

b Branches are excluded.

c Refers to output. Part or all community, social and personal services are not covered. Financial intermediation activities are excluded.

d Also includes affiliates foreign owned by more than 10 per cent. Fiscal year as reference period. Excludes affiliates of parent companies active in finance, insurance and real estate. No estimation for non-response.

e Includes wholesale and retail trade and repair activities.

f Up to 2012, it refers to the sales of affiliates which are established outside the EU (27) and controlled by EU (28) entities. Starting in 2013, it refers to extra-EU(28) sales.

Note : Given the recent development of this statistical framework, comparability and coverage of data may not always be complete. See the Metadata.

A64. Services supplied by United States affiliates established abroad (outward FATS) and by foreign affiliates in the United States (inward FATS) by economy of affiliate, 2014 (Million dollars and percentage)

Note: This information refers to supply of services products to foreigners by United States owned affiliates and supply of services products to United States persons by affiliates foreign owned. This differs from the FATS data presented for the United States in the tables A62 and A63 which refer to sales of foreign affiliates operating in the services sector. For instance the latter include sales of goods of foreign affiliates whose primary activity is classified as a service industry but not the supply of services of those whose primary activity is classified as a manufacturing industry.

World Trade Statistical Review

looks into the latest developments in world trade, with a detailed analysis of the most recent trends for trade in goods and services. It also looks at the participation of developing economies in world trade and recent trade policy developments. The analytical chapters are complemented by a statistical appendix of over 60 tables providing comprehensive data on various facets of world trade in goods and services.
